Funding provided by Feeding Missouri. The University of Missouri provided additional support.

Acknowledgement:

We would like to acknowledge and extend our gratitude to the staff and volunteers at each of the participating food pantries who dedicated their time providing insights into their organizations, as well as space and support for conducting interviews with food pantry clients.

A deep level of gratitude is also due to Nathan Holloway, Daphnis McPherson, Noël Ontman, Andrew Pham, Amber Richmond, and Theresa Scheier, our client interviewers in the Harvesters region. This project would not have been possible without their dedicated efforts, miles of driving, and commitment to centering food pantry clients in their work.

Finally, we want to extend deep gratitude to each of the clients who agreed to participate in this study and share their stories. We hope this report lifts their voices and highlights the experiences of individuals facing food insecurity in our communities.

Executive Summary

Food Assistance and Hunger in the Heartland 2021: Report for Harvesters – The Community Food Network includes findings from research conducted in the spring and summer of 2021 by the University of Missouri Interdisciplinary Center for Food Security. The research aimed to better understand the characteristics of food pantries and circumstances of food pantry clients. It involved implementation of 1) an online and telephone survey completed by food pantry directors and 2) in-person interviews with food pantry clients conducted on-site at food pantries.

This report has been prepared for Harvesters – The Community Food Network (Harvesters) and includes results obtained from Harvesters 26-county service area in Kansas and Missouri. All food pantries included in the study are affiliated with Harvesters. Likewise, clients interviewed for the study received services at a food pantry affiliated with Harvesters. The study only included food pantries (i.e., grocery programs that distribute food for off-site consumption) and did not collect data related to meal or congregate feeding programs or other types of food bank programs.

A summary of key findings¹ from this study is included directly below. The main body of this report includes [Agency Survey Key Findings](#) and [Client Survey Key Findings](#) which provide more detail. The [Complete Study Findings](#), including all data from the study, are included at the end of the document.

Agency Characteristics

Staffing

- 42% of food pantries have paid staff.
- 30% of all pantries report employing at least one full-time staff person.
- 30% of all pantries report employing at least one part-time staff person.
- 58% of food pantries have no paid staff and rely entirely on volunteers.

Volunteers

- Each food pantry utilizes an average of 49 volunteers each month.
- An average of 160 hours of service are provided by volunteers at each pantry each month.
- 55% of volunteers are 60 years of age or older.

Nutrition assistance programs

- At least 46% of food pantries provide some form of referral, information, or assistance related to the Supplemental Nutrition Assistance Program (SNAP).
- 34% provide referrals for the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC).

¹ Percentages in this section are rounded to the nearest whole number.

Client Counts & Impact of COVID-19

Client counts

- Food pantries vary greatly in terms of the number of households they serve. An average food pantry serves 253 unduplicated (unique) households each month. Households are reached an average of 336 times each month.
- Unduplicated count: Within the Harvesters region, 226,015 unduplicated (unique) clients are served in an average month and 384,874 are served annually. An estimated 66,624 unduplicated households are served in a typical month and 110,596 are served annually.
- Duplicated count: Within the Harvesters region, clients are reached 301,611 times in an average month and 3,619,329 annually. Households are reached 87,617 times in a typical month and 1,051,408 annually.

Changes in client counts

- 67% of pantries report serving more clients in 2021 compared to 2020.
- 15% report serving fewer clients compared to 2020.

Impact of Covid-19

- 78% of pantries were serving more people who were impacted by Covid-19 in 2021 compared to 2020 (e.g., from business closures, layoffs).
- 80% of pantries changed the way they distributed food (e.g., changing to drive-thru distribution).

Client & Household Characteristics

Household composition

- 38% of all households have a least one adult over the age of 65.
- 51% have at least one child under 18 years of age.
- 25% have at least one child under six years of age.
- 13% of households with children are headed by a single adult.

Client demographics

- 57% of client respondents identify as Caucasian/White.
- 16% identify as African American/Black.
- 20% identify as Hispanic/Latino/Latina/Latinx.
- 68% of respondents identify as a woman.
- 9% of clients live in temporary housing or are houseless.
- 81% have a high-school degree or higher level of education.

Veteran status

- 15% of households include someone who previously served in the U.S. Armed Forces, Reserves, or National Guard.

Employment and income

- 61% of households have at least one working adult.
- 36% of all households have a member who is working full-time.
- 47% of all households make \$15,000 or less per year.

Food pantry use

- 60% of households used a food pantry more than once a month in the summer of 2021.
- 37% of households used a pantry every month during the past year.
- 43% reported using a food pantry for more than two years.
- 54% of households get at least half of the food they consume in a typical month from a food pantry.

Food security

- 72% of households experience food insecurity.
- 39% experience very low food security (indicated by disrupted eating patterns and reduced food intake).
- 34% experience low food security (indicated by reduced quality, variety, and desirability of diet).
- 28% experience marginal food security (indicated by anxiety over food sufficiency).

SNAP eligibility and use

- 78% of households have incomes making them eligible for SNAP.
- Only 30% of client households have used SNAP in the previous year.

Use of child nutrition assistance programs

- 35% of households with children five and under used WIC in the previous year.
- 58% of households with children under 18 participate in free or reduced-price breakfast or lunch.

Health

- 38% of all households have a member with diabetes or pre-diabetes.
- 55% have a member with high blood pressure.
- 46% have a member with high cholesterol.
- 47% have a member without health insurance of any kind.

Trade-offs

- 40% of households had to choose between paying for food and *medicine/medical care* in the past 12 months.
- 49% had to choose between paying for food and *utilities*.
- 38% had to choose between paying for food and *housing*.
- 32% had to choose between paying for food and *transportation*.
- 9% had to choose between paying for food and *education expenses*.
- 16% of those with children under 18 had to choose between paying for food and *childcare*.

Coping strategies

- 63% of households purchased the least expensive food in the past 12 months, even if it wasn't the healthiest option.
- 43% purchased food in dented or damaged packages.
- 48% consumed food past its expiration date.
- 26% sold or pawned personal items.
- 22% watered-down food or drinks.

1 Introduction and Background

Food Assistance and Hunger in the Heartland 2021: Report for Harvesters – The Community Food Network includes findings from research conducted in the spring and summer of 2021 by the University of Missouri Interdisciplinary Center for Food Security. The research aimed to better understand the characteristics of food pantries and circumstances of food pantry clients. It involved implementation of 1) an online and telephone survey completed by food pantry directors and 2) in-person interviews with food pantry clients conducted on-site at food pantries.

This report has been prepared for Harvesters – The Community Food Network (Harvesters) and includes results obtained from Harvesters 26-county service area in Kansas and Missouri. All food pantries included in the study are affiliated with Harvesters. Likewise, clients interviewed for the study received services at a food pantry affiliated with Harvesters. The study only included food pantries (i.e., grocery programs that distribute food for off-site consumption) and did not collect data related to meal or congregate feeding programs or other types of food bank programs.

This study was precipitated by a need to update the findings from Feeding America’s *Hunger in America 2014*² study and to provide reliable and current information for Harvesters. As such, many of the questions used in the study questionnaires closely match those used in Feeding America’s 2014 study. However, study questions and study and sample design do differ in some regards. More details can be found in section 2 of this report, [Study and Sample Design](#).

The research team at the University of Missouri Interdisciplinary Center for Food Security was chosen because of their considerable experience in the development and implementation of survey research, including several projects focusing on food pantry clients in central and northeast Missouri. In addition, research team members have developed positive working relationships with numerous food pantries across Missouri through multiple grant-funded nutrition-improvement and capacity-building projects.

The Need for Food Assistance

There is a critical need for food assistance of all types in Kansas and Missouri. The USDA Economic Research Service³ reports that 11.3% of all Kansas households and 11.5% of all Missouri households were food insecure in 2020 (the most recent year for which data is available). 6.2% of all Kansas households and 6.4% of all Missouri households experienced *low* food security⁴. 5.1% of all Kansas and Missouri households experienced *very low* food security⁵. In total, this equates to approximately 318,000 people in Kansas and 693,000 people in

² Feeding America Hunger in America 2014 study at <https://www.feedingamerica.org/research/hunger-in-america>.

³ USDA Household Food Security in the United States in 2020 report at <https://www.ers.usda.gov/publications/pub-details/?pubid=102075>.

⁴ Indicated by “reduced quality, variety, and desirability of diet.” From USDA Definitions of Food Security at <https://www.ers.usda.gov/topics/food-nutrition-assistance/food-security-in-the-u-s/definitions-of-food-security/>.

⁵ Indicated by “disrupted eating patterns and reduced food intake.” From USDA Definitions of Food Security at <https://www.ers.usda.gov/topics/food-nutrition-assistance/food-security-in-the-u-s/definitions-of-food-security/>.

Missouri who may sacrifice the quality, variety, or desirability of their diet or go hungry at times during the year.

Findings from *Food Assistance and Hunger in the Heartland 2021: Report for Harvesters – The Community Food Network* show that the issue is dramatically worse for those using food pantries. Researchers found that 72% of food pantry client households in the Harvesters service area are food insecure. An estimated 34% of food pantry clients households have *low* food security and 39% have *very low* food security.

Harvesters and local hunger relief organizations play a vital role in providing food assistance. Their role is especially critical for those who are food insecure and may not qualify for federal nutrition assistance programs. For example, Feeding America’s *Map the Meal Gap*⁶ shows that only 41% of food insecure individuals in Kansas and 46% in Missouri have incomes below 130% of the Federal Poverty Level (FPL), making them eligible for the Supplemental Nutrition Assistance Program (SNAP) and other federal nutrition assistance programs. 14% of food insecure individuals in Kansas and 17% in Missouri have incomes between 130-185% of the FPL, making them ineligible for SNAP but still eligible for the Special Supplemental Nutrition Program for Women, Infants, and Children (WIC) and the National School Lunch Program (NSLP). 45% of food insecure individuals in Kansas and 37% in Missouri have incomes over 185% of the FPL, making them ineligible for SNAP, WIC, and NSLP.

Conducting Research During the COVID-19 Pandemic

Data collection for this study was completed during the spring and summer of 2021, at a time when COVID-19 cases were coming down from a peak in December 2020, but also when a surge in cases due to the Delta variant was starting in June of 2021. As a result, the project team implemented safety protocols for interviewers conducting in-person interviews with food pantry clients. Thankfully, no reported COVID-19 cases occurred among project personnel during their participation in this research.

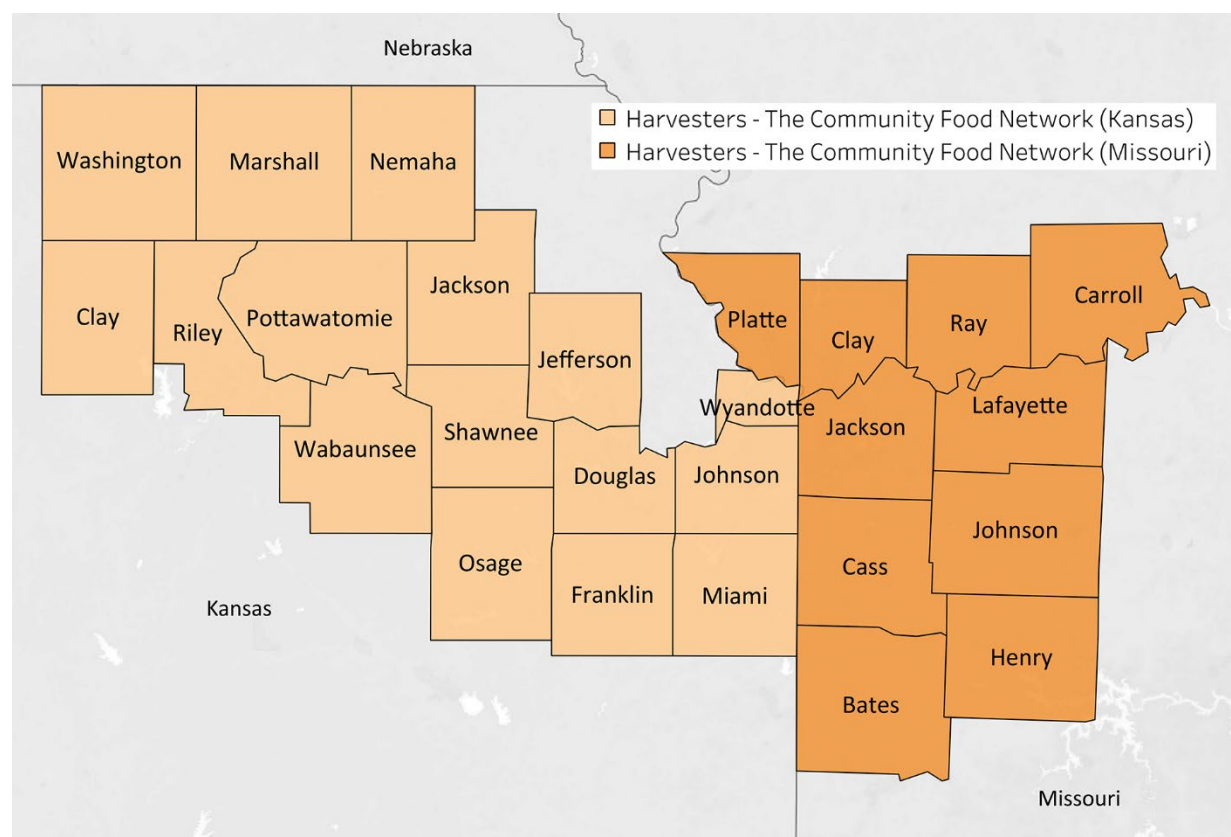

⁶ Feeding America Map the Meal Gap at <https://map.feedingamerica.org/>.

2 Study and Sample Design

The *Food Assistance and Hunger in the Heartland 2021* study followed the general pattern of previous Feeding America *Hunger in America* studies and regional studies conducted by the University of Missouri (MU) Interdisciplinary Center for Food Security (ICFS). The study involved implementation of an agency survey and a client survey. The agency survey was administered primarily online using Qualtrics, a secure, web-based survey software. The client survey was administered primarily in-person by interviewers on-site at food pantries in the study area.

The study area for the entire research project included the states of Missouri and Kansas, as well as parts of Illinois serviced by the St. Louis Area Foodbank. *The results presented in this report only include those obtained from food pantries operating in the Harvesters service area and clients served at those food pantries.* Figure 1 shows the study area for this report.

Figure 1. The Harvesters service area

Study and sample design were led by the team of ICFS researchers and involved an advisory group composed of the Feeding Missouri State Director and at least one Feeding Missouri-affiliated regional food bank representative selected by their respective Executive Directors. A representative from the Kansas Food Bank was included as well.

Initial conversations about the study began in August of 2018 and an advisory group was formed in April 2019. Early discussions centered on the concept of conducting a client survey. Later discussions incorporated an agency survey. Planning meetings eventually led to a timeline that included a client survey to be conducted in the summer of 2020 and an agency survey to

be conducted in 2021. On March 18, 2020, ICFS researchers received notice from the University of Missouri Office of Research that all person-to-person research had to be paused or discontinued due to COVID-19 concerns. As a result, a new timeline was developed that included an agency survey conducted in the spring of 2021 and a client survey conducted in the summer of 2021.

The study and associated surveys were designed through an iterative process between ICFS researchers and the advisory group. Source materials included previous *Hunger in America* surveys and previous surveys used by ICFS. The agency survey was finalized in March 2021. The client survey was finalized in May 2021.

This study only included agencies that provide grocery programs. These programs might include bricks-and-mortar food pantries, mobile food pantries, or food pantries located in schools or other institutions. Agencies that only offered meal programs were not included in the study.

Agency Survey

The agency survey was developed to be completed by directors at food pantries in the study area. The survey obtained information on a host of food pantry activities and attributes ranging from staffing to food sources. The survey was administered primarily online, via Qualtrics. Some surveys were conducted via telephone. The [Agency Survey Key Findings](#) section includes the major themes of the agency survey along with highlights from the results. Complete results from the agency survey can be found in the [Complete Study Findings](#) section.

Instrument Development

The agency survey was developed by ICFS researchers with input from the advisory group. Virtual planning meetings were conducted with the advisory group between the fall of 2020 and spring of 2021. Advisory group members identified key content areas from Feeding America's *Hunger in America 2014*⁷ survey for inclusion in the survey. In addition, they proposed new questions to address any gaps in knowledge or changes in programs and to address issues related to COVID-19 impacts. The survey was finalized and prepared for administration in Qualtrics in March 2021.

Agency Sampling

The project aimed for total participation of food pantries in the study area. Participants were recruited through their connection with Harvesters. Participants self-selected to participate through recruitment emails distributed through the food bank's email listserv. Emails were sent to all agencies and agency contacts included in the listserv.

To be eligible to participate, respondents needed to be 1) at least 18 years of age, 2) English-speaking, 3) self-identified as a food pantry director affiliated with the food bank, and 4) included in the food bank's email listserv.

A link to the survey was sent by the project director to regional food bank staff along with a short message about the survey and instructions for participants. Regional food bank staff then

⁷ Feeding America Hunger in America 2014 study at <https://www.feedingamerica.org/research/hunger-in-america>.

sent the anonymous link and accompanying message to food pantry directors via email at set intervals in March 2021. After an initial email was sent, reminder emails were sent 10 and 20 days later to promote increased response rates. Additional recruitment occurred via telephone calls to agencies that did not respond to the electronic survey. An agency contact list provided by the regional food banks to the project director was cross-referenced with completed surveys to determine which agencies required additional contact. Each agency was called at least twice and at least 3 days apart. Contacts were able to opt-out of the survey, complete the survey by phone, or request that a link to be sent to them to enable them to complete the survey online.

Staffing and Training

Staffing for the agency survey was provided primarily by the project director Darren Chapman, PhD., and Bill McKelvey, M.S., senior project coordinator. Two additional temporary staff were hired to conduct telephone interviews for those participants wishing to complete the survey via telephone and to contact non-respondents to encourage participation in either the online or telephone survey. All staff completed the University of Missouri's Institutional Review Board training (i.e., CITI training). The temporary staff received additional training from the project director related to engaging with potential respondents, tracking contacts, telephone interviewing, and utilizing Qualtrics for survey administration. The project director maintained regular communication with temporary staff to ensure fidelity with research protocols and to address any questions or concerns.

Agency Survey Implementation

The agency survey was conducted from March to May 2021. The survey was primarily self-administered through Qualtrics. A telephone version of the survey was made available for special circumstances when respondents wished to complete the survey over the telephone. As noted previously, email was the primary method of recruitment, followed by phone calls to non-responsive agencies.

Upon initial engagement with the survey, participants were presented with an overview of the study, assurances of anonymity and confidentiality, and the contact information for the project director. If participants chose to proceed, they provided their consent and either completed the survey themselves online or with a telephone interviewer. Upon completion of the survey, participants were once again provided with the contact information for the project director.

All responses were recorded directly in to Qualtrics, regardless of whether participants completed the survey themselves or with a telephone interviewer. The project director monitored the in-flow of surveys and closed the survey in May 2021.

Client Survey

The client survey was developed to survey food pantry clients while on-site during food distributions at local food pantries. The survey obtained information on a host of individual and household characteristics. The survey was administered primarily in-person by trained interviewers under the direction of regional coordinators. Some surveys were conducted via

telephone. Every client who completed a survey was entitled to an incentive in the form of a \$10 check from the University of Missouri. The [Client Survey Key Findings](#) section includes the major themes of the client survey along with highlights from the results. Complete results from the client survey can be found in the [Complete Study Findings](#) section.

Instrument Development

Like the agency survey, the client survey was developed by ICFS researchers with input from the advisory group. Virtual planning meetings were conducted with the advisory group between the winter of 2020 and spring of 2021. Advisory group members identified key content areas from Feeding America's *Hunger in America 2014*⁸ survey for inclusion in the survey. In addition, they proposed new questions to address any gaps in knowledge or changes in programs. The survey was finalized and prepared for administration in Qualtrics in May 2021.

Client Sampling

The project aimed to complete approximately 900 face-to-face surveys with food pantry clients in the Harvesters service area. This sample size ensured that data could be reported for the states of Missouri and Kansas and for each food bank region at a 95% confidence level and 4% +/- confidence interval.

Within the Harvesters service area, a target sample size was established for each food pantry that served at least 0.65% of all food pantry clients in the region. This minimum threshold was established for practical reasons – with limited time and resources, it was necessary to focus effort on those pantries that served more clients.

Once it was determined which food pantries met the minimum threshold, the target sample size for each pantry was determined. Within the region, the target sample size was calculated using the following steps:

- To determine the percentage of total regional clients served at each pantry, the number of food pantry clients served by each pantry was divided by the total number of food pantry clients served within the region. Note: the total number of food pantry clients served within the region is calculated using *only* numbers from pantries that met the minimum threshold.
- Then, the individual pantry percentage from the step above was multiplied by 900 to establish the target number of surveys for each pantry in the region.

There was a three-step process for recruiting participants. The first involved obtaining verbal permission to recruit participants from a representative at each food pantry included in the study. A regional coordinator carried out this step by contacting food pantry representatives by phone or email. During this communication, the regional coordinator also asked about food distribution logistics and the best time to survey at each site. The second step involved interviewers obtaining written consent to recruit participants from a food pantry

⁸ Feeding America Hunger in America 2014 Study at <https://www.feedingamerica.org/research/hunger-in-america>.

representative. This was done on the first day of survey collection at each participating food pantry. The third step, involving recruiting participants on site at food pantries, is described in the [Client Survey Implementation](#) section.

Staffing and Training

Implementation of the client survey required considerable staffing. Project director Darren Chapman provided leadership for the entire study and was assisted by senior project coordinator, Bill McKelvey. Chapman also served as regional coordinator for the Harvesters service area and coordinated on-the-ground research activities in the region. The regional coordinator was the primary contact with local food pantries, created schedules for interviewers, monitored interviewer performance, tracked progress towards meeting pantry and regional target numbers, and at times conducted interviews.

Additional support was provided by an administrative assistant who assisted with human resource and accounting tasks; a temporary technical staff person who assisted with processing incentives; and the University of Missouri Accounting department that processed incentive payments.

Six interviewers were employed during the summer of 2021 to provide coverage in the Harvesters region. Interviewers were undergraduate and graduate students affiliated with various colleges and universities. Upon being hired, interviewers completed University of Missouri Institutional Review Board training along with training provided by the project director and senior project coordinator. Additional training was provided by the regional coordinator.

Client Survey Implementation

The regional coordinator was responsible for developing a schedule for interviewers to maximize the number of surveys collected at each pantry and minimize the number of trips and miles traveled. Interviewers generally arrived at the food pantry before clients began gathering for food distribution. This allowed them to obtain permission to recruit participants in writing from a food pantry representative, understand the flow of traffic at the pantry, and begin interviewing clients as they arrived for food distribution.

Food pantry clients were systematically recruited by interviewers. Initially, interviewers engaged every third client in line. After two weeks of survey collection and reports that survey collection was going too slow, this was changed to every second client in line. Interviewers introduced themselves, provided a brief explanation of the project, and outlined the \$10 incentive. If the client was willing to participate, the interviewer verbally confirmed that the client was 18 years of age or older and picking up food for their household. With positive responses to those questions, the interviewer then read the informed consent script word-for-word to gain formal consent from the client. Interviewers used a tracking sheet to record whether each contact was ineligible, declined to take the survey, took the survey in person, or took the survey over the phone.

Most of the completed surveys were administered by interviewers on-site and recorded directly in Qualtrics via the Qualtrics off-line application using iPads. In some cases, interviewers used a paper copy of the survey and entered the responses into Qualtrics later. Interviewers were also given the leeway to allow participants to complete the survey themselves using the iPad or a paper copy. In rare cases, interviewers collected phone numbers of participants and later conducted the interview over the phone. These different options were provided primarily to accommodate client choice, enable interviewers to reach their target numbers in a timely manner, and serve as a back-up data collection method in cases where iPads malfunctioned.

Once the survey was completed, interviewers asked whether the participant would like to receive the \$10 incentive for their time. If they agreed, interviewers recorded the name and address of the participant on a separate hard copy tracking sheet. This information was later entered into a unique Qualtrics form. The contact information was securely stored at the University of Missouri and processed for payment according to University of Missouri Accounting policies and procedures. All hard copies of completed surveys, interviewer tracking forms, and incentive tracking forms were given to the senior project coordinator for storage in a secure place.

Client Survey Translation

The client survey was written in English and translated into Spanish. For the entire research project (including the states of Missouri and Kansas, as well as parts of Illinois serviced by the St. Louis Area Foodbank), 97.3% of responses were collected in English and 2.7% in Spanish. Clients were able to take the survey in either English or Spanish when self-administering the survey. In select regions, bilingual interviewers were able to also provide limited opportunities for client interviews to be conducted in Spanish.

3 Agency Survey Key Findings

A total of 198 agencies in the Harvesters service area responded to the agency survey⁹, representing a 44.2% response rate among all agencies in Kansas and Missouri affiliated with Harvesters. Responding agencies account for 50% of food pantry clients served within the region. Table 1 provides a breakdown of the number agency survey respondents and the response rate based on the number of agencies located the region.

Table 1. Agency survey respondents and response rate

Food Bank Region	Responding Agencies	Total Agencies	Response Rate
Harvesters – The Community Food Network	198	448	44.2%

The majority of food pantries (64.9%) are faith-based operations or located in religious institutions, while 30.8% of agencies are non-faith-based nonprofits or private organizations. The remainder are governmental agencies (2%), community action agencies (1.5%), or other types of agencies (1%).

Food Sources

Food pantry directors provided information about where they acquired food, the frequency and quantity of food procured and distributed from all sources, and the overall impact that food acquisition from a regional food bank had on the agency. Additional questions focused on food acquisition logistics and whether agencies had enough food to meet client needs.

Among responding food pantries, food sourced from Harvesters makes up the largest portion of food (74.3%) distributed by agencies. Among other food sources, local donations account for 13.1% of food distributed, purchased food accounts for 6.8%, and government product accounts for 5.8%. This breakdown is shown in Figure 2.

⁹ Mention of “the past year” throughout the Agency Survey Findings section refers generally to March 2020 – March 2021.

Figure 2. Share of food distributed by source during the past year (N=198)

Among donated food sources, 64.2% receive local donations from churches or religious organizations. Local food drives are a source of local donations for 58.7% of agencies. Local stores are a source of local donations for 41.9% of agencies. 38% of agencies receive food donations through federal commodity programs like The Emergency Food Assistance Program (TEFAP/EFAP). While non-food bank sources are common and important to many pantries, Harvesters provides the bulk of total food distributed.

A number of food pantries also purchase a range of foods to fill perceived gaps in food donations and the items received or purchased from the food bank. Meat protein items are purchased by 47.5% of the agencies surveyed. 44.1% of agencies purchase bread, rice, cereals, and pastas. Canned or frozen fruits and vegetables are purchased by 44.1% of agencies as well. Non-meat proteins like beans, eggs, peanut butter, and nuts by 41.6% of agencies.

Given the support provided by regional food banks to their partner agencies, it isn't surprising that 92.2% of agencies report that there would be a "major effect" for their food pantry if they no longer received food from the food bank.

Most food pantries (93.6%) report having enough food to meet client needs. Figure 3 provides a detailed breakdown of how partner agencies describe the adequacy of the amount of food their program had available to meet their needs during the past 12 months (March 2020 – March 2021).

Figure 3. Amount of food available to meet clients' needs during the past year (N=173)

Staffing & Training

Staffing, whether paid or unpaid, is a critical component of food pantry operations. This section explores the types of staff at pantries (including volunteers), the number of staff utilized, and the number of hours contributed by volunteers. Food pantry directors also provided insights on staff and volunteer training needs, the age of volunteers, how volunteers are recruited, and challenges associated with finding and retaining volunteers.

41.1% of agencies report having at least one paid staff to support food pantry operations. Conversely, 58.9% of agencies have no paid staff. For additional details, see Table 2 below which provides a breakdown of full-time staff (working 35 or more hours a week), part-time staff (working less than 35 hours a week), and total paid staff percentages for food pantries in the region.

Table 2. Percent of pantries with paid staff (N=197)

Number of Staff	Full-Time Staff	Part-Time Staff	Total Paid Staff
0	70.2%	70.1%	58.9%
1	10.6%	10.7%	11.2%
2	3.0%	6.6%	5.6%
3	3.5%	4.1%	6.1%
4	2.0%	2.0%	2.5%
5+	10.6%	6.6%	15.7%
Total	100%	100%	100%

A large volunteer workforce is used each month to serve pantry clients. The number of volunteers providing their time at individual food pantries varies greatly each month. Some smaller pantries may only utilize a handful of volunteers, while others report using 800 volunteers in a month.

COVID-19 also brought changes to volunteer workforces for some food pantries. A few agencies shifted or shuttered operations, resulting in no volunteers assisting the pantry. Additionally, some agencies were operated entirely by a small number of paid staff. On average, food pantries utilize 47 volunteers each month. These volunteers contribute an average of 160 total hours of service per month. Table 3 provides a more detailed breakdown on the number of volunteers used by food pantries.

Table 3. Volunteer numbers and hours worked (N=168)

Number of Volunteers and Hours Worked	Mean	Max
How many volunteers give time to this program in an average month?	47	800
How many total hours do volunteers give to this program in an average month?	160	2500

The primary source of volunteers for most food pantries (83.9%) are the food pantries themselves, which rely heavily on recruiting and maintaining volunteers already connected to the agency. 72.8% of food pantries get volunteers from religious groups in their communities. Other sources include food pantry clients (27.2%), businesses (26.7%), and K-12 school programs (21.7%). Figure 4 provides a more complete breakdown of the sources of food pantry volunteers for agencies.

Figure 4. Sources of volunteers (N=180)

By and large, most food pantry volunteers (54.7%) are 60 years of age or over. Just over one-third (39%) are between 19-59 years of age, with 6.3% under 19 years of age. Figure 5 shows the age distribution of food pantry volunteers.

Figure 5. Percentage of volunteers by age group (N=183)

In terms of volunteer acquisition and retention, most food pantries report that they have little difficulty keeping volunteers who are already involved or new volunteers who come to their organization. In essence, engaged volunteers tend to stay engaged. For many pantries, volunteer recruitment, or finding new volunteers, is an issue, with 41.3% of agencies reporting they have “some difficulty” and 15.6% indicating they have “a lot of difficulty” with this task. Despite this difficulty, most pantries (58.7%) felt confident in their ability to keep volunteers engaged.

Figure 6. Volunteer acquisition and retention (N=180)

Nearly one-half of pantries (48.6%) report that COVID-19 has made it more difficult to get and keep volunteers, whereas 44.2% said that volunteer recruitment and retention was “about the same” and 7.2% said that it was “easier.”

Given that a variety of skills are needed to run an agency, it is important to understand whether agencies perceive the need for additional training. Agencies generally believe their staff and volunteers don’t need training across a range of topics, as noted in Table 4. Fundraising/grant writing is the training topic identified by most often (46.7%) by the agencies.

Table 4. Staff and volunteer training needs (N=152)

Training Topics	A lot of training is needed	Some training is needed	No training is needed
Nutrition education	3.9%	34.2%	61.8%
Training in food safety and sanitation	3.3%	36.2%	60.5%
Accessing local food resources	3.9%	32.9%	63.2%
Advocacy training	3.3%	30.3%	66.4%
Food Stamp (SNAP) application assistance and outreach	7.9%	31.6%	60.5%
Summer feeding programs	4.6%	18.4%	77.0%
Fundraising/grant writing training	16.4%	30.3%	53.3%
Client choice training	3.9%	19.1%	77.0%
Technology assistance	3.9%	21.7%	74.3%
Social media training	3.9%	20.4%	75.7%
Nonprofit management/board governance	2.6%	17.1%	80.3%
Volunteer recruitment/retention/staff succession planning	3.3%	24.3%	72.4%
Disaster training	5.9%	29.6%	64.5%

Even if trainings were to be made available, 35.3% of agencies said they were unsure whether staff/volunteers would have time to participate. 16% of agencies said staff/volunteers would not have time to participate in additional training.

Funding & Strategic Planning

This section includes findings from questions that inquire about food pantry funding, strategic planning, and whether strategic plans include nutrition related goals or policies.

Food pantries require significant resources to carry out food and non-food related programs. Food pantry directors report a diverse range of funding sources, the most common of which is financial contributions from individuals in their communities (reported by 77% of agencies). Religious institutions are also a common funding source, with 54.6% of responding pantries

receiving funds from religious organizations. The next most common funding sources for pantries included their regional food bank (47.5%), corporations (30.6%), other sources (25.9%), government sources (21.9%), and foundations (21.3%). A few food pantries also rely on client service fees (4.4%) to help fund their activities. Figure 7 provides a detailed breakdown of the prevalence of funding sources among responding pantries.

Figure 7. Agency funding sources (N=183)

Strategic plans are important for helping organizations establish organizational values, goals, and priorities. They can also provide direction for how resources are allocated to meet client needs. 49.2% of responding agencies do not have a written strategic plan that includes items related to their food pantry. A portion of pantry directors (18.5%) were unsure if their agency has a strategic plan that includes items related to their food pantry. For the 32.3% of pantries that do have a written strategic plan, about one-third (39.3%) have nutrition policies or other nutrition goals included in the strategic plan.

Nutrition Education & Healthy Food

With increasing emphasis on nutrition in food assistance settings, it is important to understand the ways in which agencies incorporate nutrition education and the challenges they face when it comes to providing healthier foods.

Just under one-half of agencies (47.9%) report that they provide some form of programming or materials to teach clients about nutrition and healthy eating. The most common on-site form of education provided is through fliers and written materials (42.8%) followed by cooking demonstrations or tastings (15.5%) and workshops/classes on nutrition, health issues, or

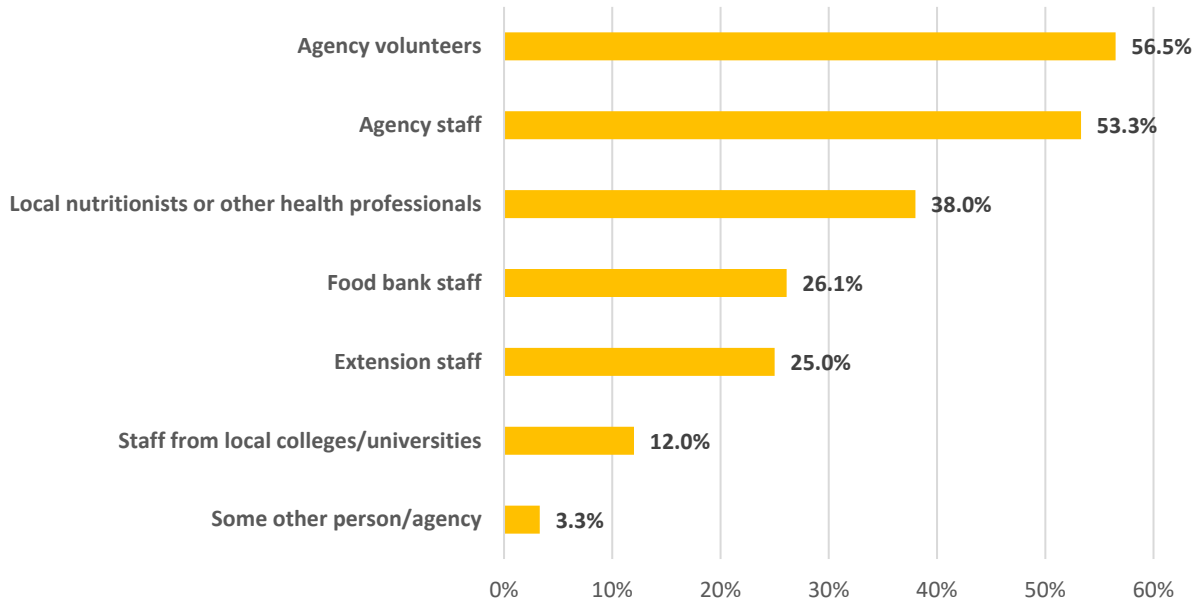

shopping on a budget (10.8%). Additional information about nutrition activities in pantries is shown in Table 5.

Table 5. Nutrition activities at food pantries (N=194)

Nutrition Activities	Provide	Refer	Neither
Fliers or written materials on nutrition and health	42.8%	3.6%	53.6%
Cooking demonstrations or tasting of healthier foods	15.5%	7.7%	76.8%
Workshops or classes on nutrition, health issues, or shopping on a budget	10.8%	9.8%	79.4%
Cooking classes	9.8%	6.7%	83.5%
Workshops or classes on specific health problems related to nutrition (e.g., diabetes)	7.2%	9.8%	83.0%
Training on gardening skills	5.7%	8.2%	86.1%
One-on-one meetings with dietician or other person trained to help people with nutrition and health	4.6%	8.2%	87.1%
Referring clients to activities related to nutrition or eating better at other locations	6.7%	12.4%	80.9%

Nutrition education activities at food pantries are led by a variety of personnel, with many pantries using more than one source. Among agencies offering nutrition education, 56.5% use their own volunteers to lead activities. Agency staff also lead activities at 53.3% of pantries. Beyond individuals affiliated with the pantry, nutrition activities at pantries are also led by local professionals (38%), food bank staff (26.1%), or Extension staff (25%). Figure 8 provides a more detailed breakdown of nutrition education implementation.

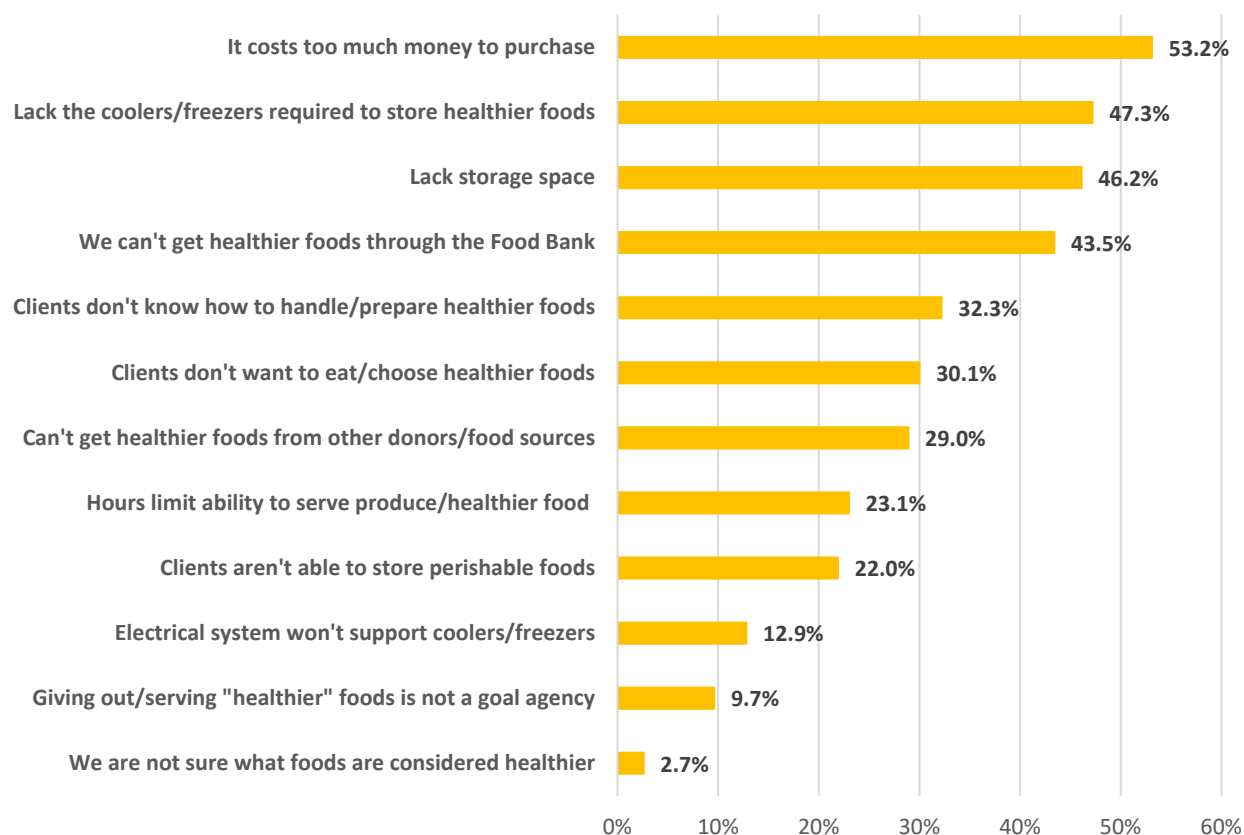

Figure 8. Who leads nutrition activities at food pantries? (N=92)

Most food pantry directors surveyed (76.4%) report that it is “very important” to their agency to serve “healthier” foods like fruits, vegetables, milk, whole grains, and lean meats. 21.5% report that the ability to serve these “healthier” options is at least “somewhat important.” Despite this acknowledgement of the importance of healthier food options, 70.8% of agencies report that “the most important thing is giving the maximum amount of food we can get to clients, even if some of it is not as nutritious as we might like.”

Agencies were also asked about the challenges they face when trying to provide healthier food. Cost is the issue noted by most agencies (53.2%), followed by lack of coolers or freezers to store healthier food (47.3%), a general lack of storage space (46.2%), and difficulty getting healthier food from the food bank (43.5%). Additional barriers are noted in Figure 9 below.

Figure 9. What prevents agencies from giving out healthier foods? (N=186)

Supplemental Nutrition Assistance Program (SNAP) Outreach

This section contains the results from questions that inquire about food pantry services related to SNAP. Specifically, food pantry directors reported if and how SNAP-related services are provided and who provides the services. Findings also highlight some of the barriers to providing SNAP-related services at agencies.

The primary method of SNAP assistance comes in the form of education to let clients know about SNAP. 57.1% of agencies provide education on-site or refer clients elsewhere to get education about SNAP. 54% of agencies provide on-site screening or refer clients to other organizations for SNAP screening.

Other forms of SNAP assistance include referring people to the food bank, helping people fill out their SNAP application, and helping people re-certify their SNAP benefits. Table 6 provides detailed information about the SNAP-related services offered by pantries.

Table 6. SNAP-related services at agencies (N=189)

SNAP-related Services	Provide	Refer	Neither
Education to let clients know about SNAP	40.2%	16.9%	42.9%
Refer to the food bank for SNAP Application Assistance	23.3%	23.8%	52.9%
Screening to help clients figure out if they are eligible for SNAP	22.8%	31.2%	46.0%
Assistance filling out applications for SNAP	20.1%	30.7%	49.2%
Help re-certifying for SNAP benefits	16.4%	29.6%	54.0%

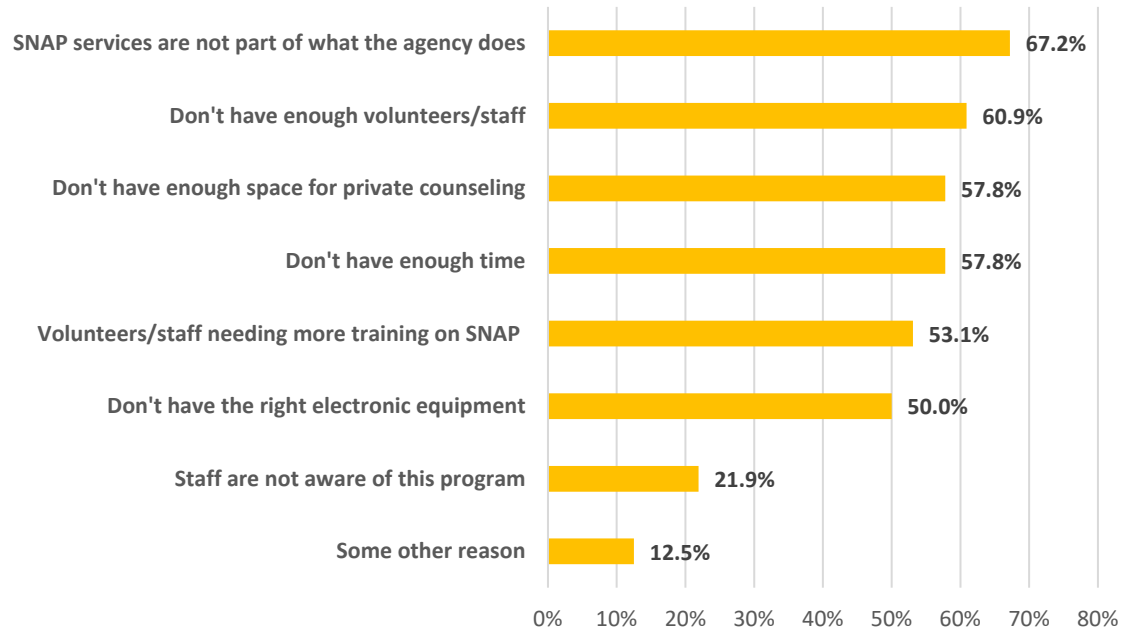

When SNAP-related services are provided on site, they may be provided by a range of individuals. SNAP related services are provided by agency staff at 56.6% of pantries providing SNAP-related services. Food bank staff provide services at 30.1% of pantries. Agency volunteers (27.7%) and staff from other organizations (21.7%) also provide services on-site at pantries.

Figure 10. Personnel or agency responsible for providing SNAP-related services (N=83)

Among the pantries that do not provide SNAP-related services, most agencies (67.2%) report that SNAP services are not part of the agency's activities or priorities. Many agencies noted limitations such as not having enough volunteers or staff (60.9%) and not having enough physical space for private counselling (57.8%). Agencies also noted not having enough time (57.8%), training (53.1%), and equipment (50%).

Figure 11. Reasons for not providing SNAP-related services (N=64)

Involvement with Other Federal Support Programs

Food pantries often provide services or referrals for safety net programs other than SNAP. Agencies were asked about their involvement in a host of federal programs along with USDA commodity food programs.

Most pantries had some involvement in utility assistance programs, whether they provided direct assistance (26.7%) or referrals (31.6%) to other agencies. Most pantries didn't engage directly with other programs identified in the survey. Table 7 provides a more complete breakdown of pantry engagement with programs including Medicaid or other health care programs, Temporary Assistance for Needy Families (TANF), housing assistance, tax preparation, Supplemental Security Income, and the Special Supplemental Nutrition Assistance Program for Women, Infants, and Children (WIC).

Table 7. Federal program assistance provided (other than SNAP) (N=187)

Federal Programs	Direct Assistance	Referral	Neither
Utility Assistance	26.7%	31.6%	41.7%
Medicaid or other health care programs	9.6%	30.3%	60.1%
The Temporary Assistance for Needy Families (TANF) program	7.5%	29.4%	63.1%
Housing assistance like Section 8	9.6%	31.0%	59.4%
Tax preparation or earned income tax credit (EITC) assistance	3.7%	27.3%	69.0%
Supplemental Security Income	6.4%	25.7%	67.9%
WIC, the federally funded health and nutrition program for women, infants, and children	6.4%	34.2%	59.4%

Nearly two out of five pantries (38.5%) provided food through the USDA Emergency Food Assistance Program (TEFAP/EFAP). 23.3% of agencies provided food from the Commodity Supplemental Food Program (CSFP). Only 1.1% provided food through the Food Distribution Program on Indian Reservations.

Figure 12. USDA commodity food program participation (N=186)

Operations

Given the diversity of food pantry operations, it is important to understand how food pantries operate to be aware of any gaps that clients may face while trying to receive services. This section includes results from questions asking agencies how many distribution sites they operate (including mobile sites), the number of years they have provided food, and the number of hours and days the pantry is open each month. This section also covers other types of grocery and non-food programs agencies may provide.

Most pantries (79.6%) operate a single distribution site. Many pantries are also long-established entities, having served their communities for many years. Agencies surveyed had been in operation for an average of 18 years. Figure 13 shows the distribution of years of operation among responding food pantries.

Figure 13. Years of operation (N=161)

Pantries are open for an average of 8 days each month, with a range from one to 24 days. Pantries are open for an average of 31 hours each month, with a range from one to 187 hours.

Table 8. Hours of operation (N=176)

Hours of Operation	Mean	Min	Max
Average open days each month	8	1	24
Average open hours each month.	31	1	187

Most food pantries don't offer evening (67%) or weekend (70.2%) food distribution options. Agencies most commonly noted they didn't have enough staff or volunteers to support food distributions during these times.

When asked about the types of grocery programs provided by agencies, the majority (82.5%) said they provide a food pantry. 36.6% offer food through mobile pantries or mobile markets and 17.5% provide CSFP foods. Figure 14 shows the full range of other grocery programs offered at the agencies surveyed.

Figure 14. Types of grocery programs (N=183)

The two primary ways that agencies incorporate general non-food programs is through providing general information and referrals (42.4%) and offering clothing and furniture assistance (34.8%). 28.3% offer utility assistance and housing assistance. Figure 15 shows the additional non-food programs offered by agencies.

Figure 15. Types of non-food programs (N=184)

Recent Operational Changes

This section includes findings related to how and why an agency may have made changes to their operations during the past year (March 2020 - March 2021) and is intended to provide information on possible impacts of COVID-19 on food pantry operations.

Most agencies (80%) changed the way they provided food to clients during the past year. Many (48.6%) also limited the number of volunteers allowed to work at one time. Some (31.9%) had to temporarily close, while others increased their hours (25.9%), limited their service area (21.6%), or cut their hours of operation (20.5%). Figure 16 provides a breakdown of these operational changes.

Figure 16. Operational changes in the past year (N=185)

Operational changes occurred at pantries for a variety of reasons. COVID-19 was the primary reason given by most pantries who made the changes noted above. Agencies were forced to adapt because of concerns about exposing volunteers to COVID-19 (79.6%), health department orders (79%), and the need to serve more clients (45.7%). Lack of staff and volunteers (31.5%) and quarantines or positive COVID-19 cases at the pantry were factors as well. Figure 17 shows the reasons for recent operational changes.

Figure 17. Reasons for operational changes in past year (N=162)

Despite the struggles that pantries faced to keep staff and volunteers safe, navigate changing COVID-19 protocols, and meet the need of their clients, the majority of pantries (83.3%) were generally confident in the agency's ability to continue to provide services in the future.

Use of Communications & Technology

Food pantries connect with their communities through a variety of means. This section covers agency communication methods, messages, and use of technology.

To communicate within their communities, nearly all agencies (97.8%) use word-of-mouth to get the word out about their services. Referrals from other organizations (75.1%), social media (74.6%), and a website (70.3%) are other, higher-ranked methods. Only a few pantries (28.6%) use newspaper, radio, and TV. Figure 18 below includes all response options and their relative use by agencies.

Figure 18. Methods used by agencies to let people know about services (N=185)

Agencies also have an opportunity to communicate about the issue of hunger to a broader audience. When asked, most agencies (62.7%) said they take part in some form of education about hunger to their community or congregation. Beyond general education aimed at their communities, 26.1% participate in local hunger networks (i.e., local food policy coalitions, United Way, human services coalitions, etc.) while 25% of pantries strategically invite politicians or other interested people to their agency. Other activities are noted in Figure 19.

Figure 19. Methods used by agencies to communicate about the problem of hunger (N=184)

By and large, most agencies have embraced the internet age. They typically use computers for email (94.1%), reporting information to their regional food bank (90.8%), and ordering food from their food bank (83.2%). Additional ways that agencies use technology are shown in Figure 20.

Figure 20. How agencies use technology (N=185)

Client Intake

Many food pantries require their clients to go through an intake process before receiving services. This section includes findings on client identity verification, client eligibility requirements, and how agencies track client usage.

Most agencies (72.4%) said that clients are required to register, or to go through an intake process, before they can receive food or services. Most often, agencies require a driver's license (39.4%) or other state issued ID (30.6%), and/or a utility bill, telephone bill, or other proof of residency (25.6%). For clients that don't have necessary documentation to receive services, most pantries (93.3%) allow one-time service to these individuals, with some agencies (41.3%) also referring clients to another program in the community for similar services.

Many pantries (55%) require clients to meet specific eligibility conditions to receive services. These eligibility requirements are typically based on where the client lives (36.7%) and client household income (19.4%). Other eligibility conditions for services may include age (8.3%), citizenship (0.6%), or another condition (10.6%).

Almost all agencies keep track of client visits in some capacity. Most food pantries (48.6%) use a combination of manual records and computer programs to keep track of client visits, with around one-third of agencies (32.4%) relying exclusively on manual records (e.g., paper/pencil, notebook, index cards). The remainder of agencies solely utilize some form of computer program to track client visits, either through a custom designed computer program (10.8%) or more standard computer programs like Microsoft Office (8.1%).

Client Characteristics

This section explores the different groups of clients served at food pantries, along with client counts. Agencies were asked about client household characteristics and changes in the number of people served compared to the previous year.

Agencies serve a wide range of food pantry clients, with nearly all pantries (97.7%) serving families with children under the age of 18, seniors over the age of 60 (96.6%), and non-elderly adults without children (94.9%). Some agencies (15.9%) also work specifically to address child hunger, serving only children under the age of 18 through their pantry or through a school-based program.

Agencies also served a variety of groups over the 12 months preceding the survey (March 2020 - March 2021). In particular, agencies noted individuals affected by COVID-19 business closures (88%), veterans or their families (82.9%), non-English speaking clients (71.4%), college students (64.6%), active military personnel or their families (48%), and individuals affected by natural disasters (43.4%).

Figure 21. Specific groups served by agencies in the past year (N=175)

Agencies were asked to indicate the language diversity among the clients that they serve. While programs primarily serve English speaking households, many agencies also report serving clients whose primary language at home is not English. Among responding agencies, 98.9% serve English speaking client households and 68.6% serve Spanish speaking households. Other languages spoken by client households can be found in the Client Characteristics section in the Complete Study Findings. Despite the wide range of languages spoken by food pantry clients, most food pantries (67.2%) in the Harvesters network don't offer information about services in a language other than English.

Food pantries vary greatly in terms of the number of households they serve. An average food pantry in the region serves 253 unduplicated (unique) households each month. Households are reached an average of 336 times each month.

Within the Harvesters region, 226,015 unduplicated (unique) clients are served in an average month and 384,874 are served annually. An estimated 66,624 unduplicated households are served in a typical month and 110,596 are served annually. Clients are reached 301,611 times in an average month and 3,619,329 annually. Households are reached 87,617 times in a typical month and 1,051,408 annually.¹⁰

Compared to the previous year (March 2020 - March 2021), 67.2% of food pantries reported providing food to more clients, 17.8% served about the same number of clients, and 14.9% served fewer clients.

Figure 22. Client counts in March 2021 compared to the previous year (N=174)

¹⁰ This study only included food pantries (i.e., grocery programs that distribute food for off-site consumption) and did not collect data related to meal or congregate feeding programs or other types of food bank programs.

The impact of seasonal and COVID-19 related factors on client counts was also noted by food pantry directors, with 51.7% of pantries seeing greater need during school breaks (e.g., summer, long holidays, COVID-19 closures). The most attributed cause (77.8%) to the rise in client counts was households affected by COVID-19 business closures and layoffs.

Client Service Limits

This section explores limits agencies may place on food distribution, including how often a household can get food and whether households must live within certain geographic boundaries to receive food.

Many food pantries (46%) limit the number of times a client or household can get food in a given period of time. Among pantries that impose restrictions, the most common reported limitation (65%) is that households can only receive food pantry services once per month. The COVID-19 pandemic did cause some agencies (32.2%) to change their rules and allow people to get food more frequently.

Geographic service limits are in place for 38.4% of responding agencies. Most often these limits are based on county limits (38.5%) or specific ZIP codes (26.2%).

13.9% of agencies reported they turned clients away from receiving services in the past 12 months. The most common reasons for refusing services included clients seeking services who lived outside the program's service area (50%) and clients coming more often than program rules allowed (50%).

Facilities

Food pantry facilities and infrastructure vary among agencies. This section explores whether agencies rent or own the structure that houses their food pantry and the types of infrastructure and equipment present within a facility.

Just over three-quarters of agencies (77.1%) either own their building mortgage-free or operate in a space that is provided for free. 15.9% own the space with a mortgage while 7.1% rent their space.

Figure 23. Ownership of the facility that houses the food pantry (N=170)

Most commonly, 67.6% of agencies operate in a building owned by a church, mosque, synagogue, or other religious institution. Others (15%) are located in a retail, office, or commercial building. Most agencies (85%) also noted that their current location meets their needs.

The majority of agencies have freezers (80.3%) and coolers (79.8%). However, 41% of agencies said they don't have an adequate number of freezers while 49.1% reported they don't have an adequate number of coolers or refrigerators.

Table 9. Equipment and space present at the facility (N=173)

Pantry Infrastructure	Yes	No
An area where you give out food or serve meals	79.8%	20.2%
A storage area for large amounts of food that don't need refrigeration	78.0%	22.0%
A freezer	80.3%	19.7%
Adequate number of freezers	59.0%	41.0%
A cooler or refrigerator	79.8%	20.2%
Adequate number of coolers or refrigerators	50.9%	49.1%
Office space to meet with clients (to complete intake/or provide referrals), like a reception area, cubicle, or office	57.8%	42.2%

Food Bank Assistance

Agencies were asked to consider what was most helpful to them in terms of what food banks currently provide. General food availability (26.6%), food delivery (21.4%), and no or low-cost food (21.4%) were noted most frequently. Additional items that accounted for at least 1% of total responses are shown in Table 10 below. (Note: While agencies were asked to identify the single most important service, many mentioned multiple activities.)

Table 10. What is the most helpful good, service, benefit, or product the food bank currently provides to your agency? (N=154)

Response	%
General food availability	26.6%
Food delivery	21.4%
No/Low-cost food	21.4%
Food item - Fresh produce	13.6%
Food item - Proteins	11.7%
Variety of food available	8.4%
Food bank support/information	7.1%
Public food assistance programs	7.1%
Food item - Non-perishable foods	5.8%
Quantity of food available	5.8%
Food bank staff	4.5%
Food item - Dairy products	2.6%
Quality products	2.6%
COVID supports	1.3%
Food bank ordering platform	1.3%
Food bank trainings	1.3%
Mobile food pantry	1.3%
Non-food items	1.3%
Nutrition supports	1.3%
Senior specific supplies/commodities	1.3%
Volunteer support & coordination	1.3%

In terms of the most important good, service, benefit, or product the food bank could provide in the future, the most common response (25.7%) was “nothing”, followed by more fresh produce (11.5%), dairy products (9.5%), and proteins (8.8%). Additional items that accounted for at least 1% of total responses are included in Table 11 below. (Note: While agencies were asked to identify the single most important service, many mentioned multiple activities.)

Table 11. What is the most important good, service, benefit, or product the Food Bank could provide to your agency that would allow you to better serve your clients? (N=148)

Response	%
Nothing	25.7%
More fresh produce	11.5%
More dairy products	9.5%
More proteins	8.8%
More nutritious food	6.1%
More food generally	4.7%
More variety in food	4.1%
Prepared food boxes	4.1%
More variety in food (proteins)	3.4%
Unsure	3.4%
Improved or additional refrigeration/freezers	2.7%
More variety in food (fresh produce)	2.7%
Financial assistance	2.0%
Food delivery	2.0%
Additional food delivery	1.4%
Client database system improvement	1.4%
Community engagement assistance	1.4%
Flexibility in food bank services/provisions	1.4%
Improved delivery coordination	1.4%
Improved food tracking	1.4%
More consistent selection	1.4%
More household items	1.4%
More non-perishable foods	1.4%
More variety in food (breads)	1.4%
Volunteer support/coordination	1.4%

4 Client Survey Key Findings

During the period of mid-May 2021 through mid-August 2021¹¹, a total of 951 food pantry client households receiving food at a food pantry affiliated with Harvesters completed the client survey. The completion rate among those who were approached to take a survey was 46%. Table 12 provides details about completed surveys within the region, including the number and percent of surveys completed at each pantry

Table 12. Client survey responses by food pantry

Food Pantry	n	%
A Turning Point Ministry Inc.	46	4.8%
Abundant Life Food Pantry	35	3.7%
Bishop Sullivan - Truman	6	0.6%
Catholic Charities Hope Distribution Center	79	8.3%
Catholic Charities Olathe EAC	46	4.8%

Total	951	100%

Client Characteristics

This section provides information about the age, gender, education level, race, living situation, primary language spoken at home, and marital status of food pantry client households.

¹¹ Mention of “the past year” in this section is meant to generally include the summer 2020 – summer 2021.

Information about the presence of an active military member or veteran in the home is also included.

A majority of clients (67.8%) identify as a woman and 31% identify as a man. Just over four-fifths (81.1%) have achieved a high school diploma or higher level of education.

Just under half (45%) of food pantry clients who participated in the survey were over the age of 54, with 25.6% of respondents over the age of 64. Figure 24 provides a detailed breakdown of client survey respondents by ages.

Figure 24. Age of client survey respondents (N=935)

56.8% of clients surveyed identify as Caucasian/White. 15.7% identify as African American/Black. 19.5% identify as Hispanic/Latino/Latina/Latinx. Additional race and ethnicities of clients are noted in Table 13.

Table 13. Race and ethnicity of client survey respondents (N=909)

Race and Ethnicity	%
African American/Black	15.7%
Asian American/Asian	0.8%
Caucasian/White	56.8%
Hispanic/Latino/Latina/Latinx	19.5%
Native American or Alaskan Native	1.3%
Pacific Islander	0.4%
Middle Eastern or North African	0.1%
Another identity	0.6%
Multiple identities	4.8%

The majority of clients (77%) live in their own home. Some (11.2%) live in a household with other people or have a roommate and 9.4% report being unsheltered or living in a temporary living situation.

English is the primary language spoken at home for 83.3% of clients. The next most common language spoken in 15.1% of homes is Spanish.

The largest percentage of clients (34.3%) report they are either married or in a domestic partnership. 21.4% say they are single and never married. Others report their status as currently divorced (18.6%), widowed (11%), not married but currently living with a partner (9.8%), or separated (4.8%).

A very limited number of client households (0.8%) include someone who is currently serving in the military, while 15.1% of households include someone who has served in the US Armed Forces, Reserves, or National Guard in the past.

Household Composition

This section includes information about client household size along with children and adults (including seniors) living in households.

Client households include 3.5 people on average, with 56.1% including three or fewer people. Figure 25 below includes additional details about the size of client households.

Figure 25. Household size (N=937)

In terms of the number of adults present in households, 24.9% have one adult and 43.8% have two adults. 37.8% of households include an adult who is over the age of 65.

Just over one-half of households (50.7%) include a child under 18 years of age. Of those households, 56.7% have two or fewer children. 48.8% have one or more children under six years of age. 12.8% of households with at least one child under 18 years of age are headed by a single adult.

Employment & Income

This section includes findings on the employment status of adults in households. Food pantry clients also provided information about their monthly and annual household income and additional sources of household income beyond employment.

Among all client households surveyed, 60.8% have at least one employed adult in the house. 14.6% of households have an adult in the household who is currently a student.

A closer look at the employment status of adult household members shows that 62.1% of households with a working adult have a member who is working full-time (30 or more hours per week). 26.3% of households with a working adult have a member who is working part time (less than 30 hours per week). The remainder of households with a working adult include someone who is self-employed (16%), employed in seasonal work (7.3%), or working multiple part-time positions (3.6%).

Figure 26. Types of employment for adults during the past year (N=551)

Food pantry client households rely on a variety of income sources other than employment. Just over one-third (35.4%) receive income through Social Security or other types of pensions, 28.5% receive income through SNAP, and 19.6% receive Supplemental Security Income (SSI) or disabled veteran's benefits. Only a small fraction receives unemployment insurance or worker's

compensation (8.2%) or support through the Temporary Assistance for Needy Families (TANF) program (2.3%).

Figure 27. Additional sources of household income received during the past year (N=917)

70.1% of households make \$25,000 or less in combined annual household income (from all income sources) while 20.4% of households make \$5,000 or less a year. 74% of households make \$2000 or less per month. Figure 28 and Figure 29 show more details about the annual and monthly income of food pantry client households. For information about monthly income relative to household size, and how that impacts SNAP eligibility, see the [Supplemental Nutrition Assistance Program \(SNAP\) Use](#) section below.

Figure 28. Combined annual household income (N=802)

Figure 29. Combined monthly household income (N=832)

Food Pantry Use & Preferences

The findings in this section show how often households used a pantry in the past year, how long they have used a pantry, and what may have prevented them using a pantry as often as they desired. In addition, people were asked how long food from the pantry lasts for their household and what programs or services other than food would be most useful to access at a pantry.

During the past year, 48.7% of respondent households utilized a food pantry nine or more months during the past year. A closer look shows that 37.1% households utilized a food pantry every month during the previous year. Figure 30 provides a complete breakdown of the frequency of pantry use during the past year. Study findings also show that 59.8% of households utilized a food pantry more than once during the previous month.

Figure 30. Number of months households used a food pantry during the past year (N=916)

In terms of the duration of food pantry use, 42.5% of households have used a food pantry for more than 2 years. 27.2% have used a pantry for one to two years. 30.3% are new food pantry users, have used a pantry for less than a year, and started using a pantry during the COVID-19 pandemic.

Figure 31. How long households have used a food pantry? (N=930)

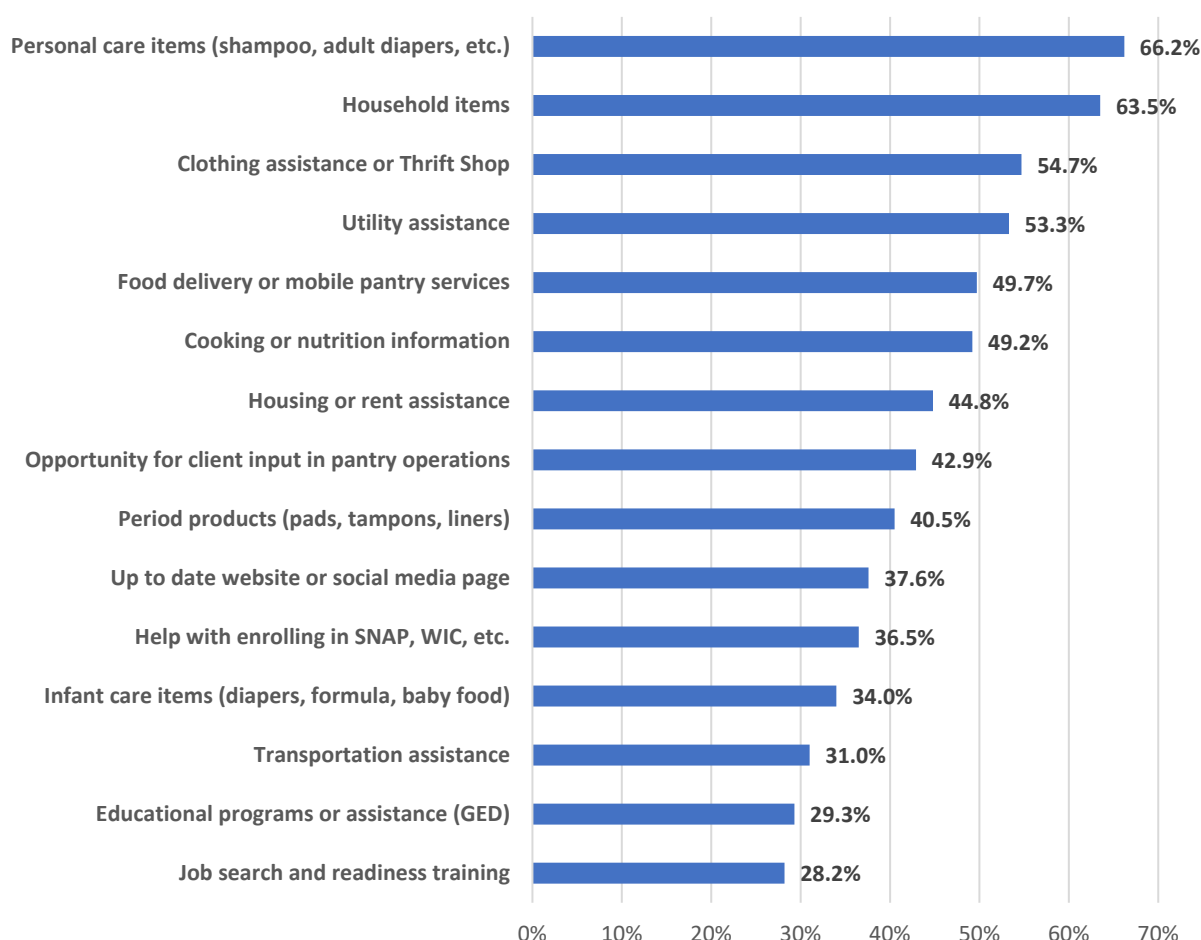

Clients also highlighted the role that pantry provisions play in the food consumed by their household during an average month. For 69% of households, at least a quarter of food consumed by the household in a typical month is obtained from a food pantry. For 54% of households, at least half of the food consumed in a typical month is obtained from a food pantry.

42.5% of food pantry clients said there was a time they needed assistance but were not able to use the food pantry. A lack of transportation was the most common issue mentioned by clients (54.2%), followed by hours of operation (39.9%), and having already used the food pantry during a given period (29.4%).

Food pantry clients were given the chance to identify programs or services beyond food that would be helpful at an “ideal food pantry.” Figure 32 includes the results from this question. The top three results included personal care items (66.2%), household items (63.5%), and utility assistance (53.3%).

Figure 32. Most helpful programs or services other than food that could be offered (N=949)

Food Security Status

This section includes a summary of results from the USDA-Economic Research Service U.S. *Household Food Security Module: Six-Item Short Form*¹² that was utilized for the study.

Findings show that rates of food insecurity are dramatically higher among food pantry client households when compared to all Kansas and Missouri households. Based on this study's findings, 72.2% of food pantry client households are food insecure (noted in yellow in Figure 33 below). In contrast, the most recent data from the USDA¹³ shows that 11.3% of all Kansas households and 11.5% of all Missouri households are food insecure. The remainder of food

¹² USDA Survey Tools at <https://www.ers.usda.gov/topics/food-nutrition-assistance/food-security-in-the-u-s/survey-tools/#six>.

¹³ USDA Household Food Security in the United States in 2020 report at <https://www.ers.usda.gov/publications/pub-details/?pubid=102075>.

pantry client households (27.8%) are considered to have marginal food security¹⁴, indicated by households having “anxiety over food sufficiency or shortage of food in the house¹⁵.”

Of the 72.2% of food insecure households, 46.7% have *low* food security, indicated by “reduced quality, variety, or desirability of diet”, and 53.3% have *very low* food security, indicated by “disrupted eating patterns and reduced food intake¹⁶.” This latter group of *very low* food secure households – those who truly don’t have enough food to meet their needs – make up 38.5% of all food pantry client households surveyed. By comparison, the *very low* food security rate for all Kansas and Missouri households is 5.1%.

Figure 33. Food insecurity among food pantry client households (N=852)

Trade-offs

People who are food insecure often struggle with affording other necessities of life. This section highlights the tough decisions that food pantry clients must make when it comes to paying for food or paying for essentials including medicine, utilities, housing, transportation, education expenses, and childcare. Table 14 below includes responses to the question, “In the past 12 months, have you or anyone in your household ever had to choose between paying for food and paying for...?”

¹⁴ The remaining 27.8% of non-food insecure households may have reported 0, 1, or 2 indications of food insecurity. All were assigned to the “marginal food security” category by virtue of their presence at a food pantry, even if 0 indications of food insecurity were noted. According to USDA, food secure households have an “[a]ssured ability to acquire acceptable foods in socially acceptable ways (that is, without resorting to emergency food supplies, scavenging, stealing, or other coping strategies).” See USDA Food Security in the U.S. Measurement page at <https://www.ers.usda.gov/topics/food-nutrition-assistance/food-security-in-the-u-s/measurement/>.

¹⁵ USDA Definitions of Food Security at <https://www.ers.usda.gov/topics/food-nutrition-assistance/food-security-in-the-u-s/definitions-of-food-security/#ranges>.

¹⁶ USDA Definitions of Food Security at <https://www.ers.usda.gov/topics/food-nutrition-assistance/food-security-in-the-u-s/definitions-of-food-security/#ranges>.

Paying for utilities poses the greatest trade-off challenge for most households (48.7%). This is followed by paying for medicine/medical care (40.3%), housing (37.7%), transportation (32.3%), and education expenses (9.1%). For households with children, 16.3% report having to choose between paying for childcare and food.

Table 14. Food pantry client household trade-offs

Trade-off	%	N
Medicine/Medical care	40.3%	894
Utilities	48.7%	895
Housing	37.7%	891
Transportation	32.3%	871
Education expenses	9.1%	854
Childcare (among HHs with children)	16.3%	423

Additional Food Sources & Coping Strategies

Those facing food insecurity use food pantries along with other programs and strategies to meet their food and nutrition needs. This section explores peoples' use of federal and other food assistance programs in the past 12 months, including those focused on children. Findings also highlight the strategies clients use to make their food budget go farther.

The Supplemental Nutrition Assistance Program (SNAP) is utilized by 29.5% of households while the Special Supplemental Nutrition Program for Women, Infants and Children (WIC) is utilized by 35.2% of households with children under five years of age. Other programs such as mobile food pantries (19.9%) and senior boxes (7%) were noted as well. Nearly one-half of households (46.5%) do not use any of the listed programs. Figure 34 provides additional details about the use of additional food assistance programs.

Figure 34. Additional food assistance programs used by households in the past year (N=911)

* Percent of WIC participants among households with children under 5 years of age

Child nutrition programs provide important sources of food for households with children. For example, 57.6% of households with children participate in the free or reduced-price breakfast or lunch programs. Summer food programs for children (20%), after school snacks or meals (17%), backpack programs (11%), and school food pantries (9.9%) were noted as well. 35.5% of households with children do not use any of the listed programs.

Figure 35. Child nutrition program participation among households with children (N=461)

Households use a variety of coping strategies to stretch their food budget. A majority of households (63.1%) noted purchasing the least expensive food, even if it wasn't the healthiest option. 49.2% had gone to more than one food pantry, 47.7% ate food past its expiration date,

and 43.3% purchased food in dented or damaged packages. Households also sold or pawned personal property (25.5%) and watered-down food or drinks (22.4%). Only 14% had not used any of the strategies listed.

Figure 36. Coping strategies utilized by households (N=906)

Supplemental Nutrition Assistance Program (SNAP) Use

The Supplemental Nutrition Assistance program provides essential benefits to people facing or living with food insecurity. This section explores SNAP use among client households in detail. The findings center on household income eligibility for SNAP and reasons households may not use SNAP.

As noted in the previous section, 29.5% of households surveyed utilized SNAP at some point in the past 12 months. However, findings from this study indicate that an estimated 78% of food pantry client households are income eligible for SNAP. For example, households may only have up to \$2,500 in resources (or \$3,750 if everyone in the household is over 60 years of age or disabled) and meet other requirements to qualify.¹⁷

In Table 15 below, monthly household income is shown by household size. The orange boxes show the number of households who are income eligible for SNAP, using 130% of the Federal Poverty Level (the income threshold for SNAP) as the threshold. The table then tallies the number of SNAP eligible households and divides that number by the total number of households to provide the percentage of food pantry client households (78%) who are income eligible for SNAP.

¹⁷ Missouri Department of Social Service SNAP eligibility criteria at <https://mydss.mo.gov/food-assistance/apply-for-snap> and Kansas Department of Children and Families Food Assistance FAQs at <http://www.dcf.ks.gov/services/ees/Pages/Food/FoodAssistanceFAQs.aspx>.

Table 15. Estimated percentage of SNAP-eligible households (N=826)

Monthly Income	Household Size										Total HHs	SNAP Eligible HHs
	1	2	3	4	5	6	7	8	9	10+		
\$0	32	20	19	18	12	9	3	2	2	1	118	118
<\$500	11	12	17	12	14	8	6	2	1	2	85	85
\$501-\$1000	47	33	23	17	17	9	2	5	1	0	154	154

>\$4000	4	13	3	5	3	3	0	0	2	1	34	3
Total											826	644
												78.0%

Among all food pantry clients who don't use SNAP, 39% had applied but didn't or no longer qualify for benefits. For those who didn't qualify for SNAP, 53.8% said their income was too high to qualify and 7.2% said their assets were too high to qualify. Some reported application issues (9.6%), exhausting the time period to receive benefits (2.9%), another reason (16.3%), or not being sure about why they didn't qualify (10.1%).

Among food pantry clients who hadn't applied for SNAP, 40.8% said they didn't think they were eligible. Others noted unfamiliarity with the program (17.5%), personal reasons (12.7%), an application process that is too difficult (10.6%), or another reason (18.4%).

Health

Chronic health conditions and inadequate or no access to health insurance impact the overall quality of life of hundreds of thousands of people. In addition, social and economic factors can exacerbate health disparities. This section includes findings on the percent of households and household members who have diabetes, high blood pressure or hypertension, high cholesterol, and who lack health care coverage.

Among all food pantry client households surveyed, 38.5% percent of households include at least one individual with diabetes, 54.9% have a member with high blood pressure, and 45.6% have a member with high cholesterol. 47.1% have a household member who lacks health insurance. Table 16 provides a summary of this information.

Table 16. Health conditions among households (N=898)

Health Condition/Circumstance	Households with condition present
Diabetes	38.5%
High blood pressure/Hypertension	54.9%
High cholesterol	45.6%
Lack of health insurance	47.1%

Findings from this study presented in Table 17 allow for a comparison with Centers for Disease Control and Prevention (CDC) Behavioral Risk Factor Surveillance System (BRFSS) data¹⁸ to understand how rates of health conditions among food pantry clients compare to all Missourians and Kansans. Diabetes has a disproportional impact on food pantry clients. Our findings show that 21.6% of adults in food pantry client households have diabetes, compared to 10.8% of all Missouri adults and 11.1% of all Kansas adults. High blood pressure/hypertension rates for adults in food pantry client households (32.2%) are similar to Missouri and Kansas rates. Rates of high cholesterol are lower for adults in food pantry client households (25.1%) compared to all Missouri and Kansas adults.

While not directly comparable to BRFSS data, it is important to note that 28.4% of people in food pantry client households lack health care coverage.

Table 17. Health conditions among adults (N=907)

Health Condition	Adults in Food Pantry Client HHs	MO / KS Averages ¹⁹
Diabetes	21.6%	10.8% / 11.1%
High Blood Pressure/Hypertension	32.2%	30.9% / 33.5%
High Cholesterol	25.1%	34.4% / 34.9%

¹⁸ Centers for Disease Control and Prevention BRFSS Prevalence & Data at <https://www.cdc.gov/brfss/brfssprevalence/>.

¹⁹ Averages are from CDC BRFSS Prevalence & Trends Data. Data are from most recent years available (2019 for high blood pressure and high cholesterol; 2020 for diabetes).

5 Complete Study Findings

This section includes the complete study findings for all questions asked in the agency and client surveys.

Agency Survey

Region Breakdown & Agency Type

Responses by state		
	Responding Agencies	% of Total
Missouri	117	59.1%
Kansas	81	40.9%
Total	198	100.0%
Percent of total clients served by responding agencies		49.6%

Response rates within states			
	Responding Agencies	Total Agencies	% within State
Missouri	117	253	46.2%
Kansas	81	195	41.5%
Total	198	448	44.2%

What best describes your agency? N=198	
Agency Type	%
Faith-based or located in a religious institution	64.6%
A governmental agency	2.0%
A Community Action Program (CAP)	1.5%
Nonprofit or private organization (non-faith-based, governmental, or CAP)	30.8%
Other	1.0%
Total	100.0%

Food Sources

Thinking about the total pounds of food that your agency gave out or served during the past 12 months, please estimate the percentage (%) of that food your agency got through each of the following sources. N=198	
Food Source	Average
Food Bank (including coordinated food rescue & retail pick-up program)	74.3%
Local product donations the agency obtained on its own (e.g., donations directly from retailers, food drives, etc.)	13.1%
Buying food from retail stores or food service companies	6.1%
Buying food from local manufacturers	0.1%
Buying food from other sources (e.g., food coop, direct purchases from farmers/growers, Internet, wholesalers)	0.7%
Government product donations not obtained from the food bank (e.g., USDA Food Boxes, Farmers to Families)	5.8%
Total	100.0%

During the past 12 months, did this program get donations of food and grocery products from...? N=179			
	Yes	No	Total
Churches or religious congregations	64.2%	35.8%	100.0%
Local restaurants	20.7%	79.3%	100.0%
Other local stores	44.1%	55.9%	100.0%
Local manufacturers	15.6%	84.4%	100.0%
Farmers	35.2%	64.8%	100.0%
Local food drives (e.g., Boy Scouts, Letter Carriers, etc.)	41.9%	58.1%	100.0%
Federal commodities, such as The Emergency Food Assistance Program (TEFAP/EFAP)	38.0%	62.0%	100.0%
Emergency Food and Shelter Program	6.1%	93.9%	100.0%
State funded food purchase program	7.3%	92.7%	100.0%
Some other donated source	49.2%	50.8%	100.0%

During the past 12 months, how often did this agency BUY each of the following food and grocery products from sources other than the Food Bank? How often did this program purchase...?						
	Frequently	Occasionally	Rare	Never	N	Total
Bread, rice, cereals, and pasta	9.5%	21.2%	13.4%	55.9%	179	100.0%
Fresh fruits and vegetables	7.3%	12.4%	19.8%	60.5%	177	100.0%
Canned or frozen fruits and vegetables	13.4%	14.0%	16.8%	55.9%	179	100.0%
Meat, poultry, and fish	11.3%	18.1%	18.1%	52.5%	177	100.0%
Non-meat proteins - beans, eggs, peanut butter, and nuts	10.7%	15.7%	15.2%	58.4%	178	100.0%
Milk, yogurt, and cheese	12.4%	8.5%	11.9%	67.2%	177	100.0%
Fats, oils, condiments, and sweets	4.5%	10.7%	11.2%	73.6%	178	100.0%
Paper plates, napkins, plastic silverware	6.8%	5.6%	6.2%	81.4%	177	100.0%
Personal care products (e.g., soap, toothpaste, deodorant)	13.0%	16.9%	14.1%	55.9%	177	100.0%
Household products (e.g., laundry detergent, cleaning products)	13.0%	14.7%	11.3%	61.0%	177	100.0%
Baby products (e.g., laundry detergent, cleaning products)	7.9%	11.9%	12.4%	67.8%	177	100.0%
Senior products (e.g., adult diapers, meal replacement drinks, prepared foods)	4.0%	7.4%	13.1%	75.6%	176	100.0%

What would the effect be on this program if you no longer got food from the Food Bank? N=179	
	%
Major effect	92.2%
Minor effect	7.3%
No effect at all	0.6%
Total	100.0%

How would you describe how much food this program had available to meet your clients' needs during the past 12 months? N=173	
	%
The program had a lot more food than needed to meet clients' needs	12.1%
The program had somewhat more food than needed to meet clients' needs	26.6%
The program had enough food to meet clients' needs	54.9%
The program had somewhat less food than needed to meet clients' needs	5.8%
The program had a lot less food than needed to meet clients' needs	0.6%
Total	100.0%

Please indicate the ways that this program obtains food and grocery products from the Food Bank: N=171
