Acknowledgements

The Missouri Hunger Atlas is an outcome of a cooperative endeavor between the Interdisciplinary Center for Food Security and Center for Health Policy at the University of Missouri (MU). In addition to the authors listed, support was provided by Glenn Rice at the Center for Health Policy. Additional support was provided by the MU Division of Applied Social Sciences in the College of Agriculture, Food and Natural Resources and MU Extension's Health and Human Sciences and Business and Communities units.

Our efforts would not have been possible without the support of public and private agencies who shared data on agency programs with us. Specifically, we received assistance in the retrieval of data from the Missouri Department of Social Services, Missouri Department of Elementary and Secondary Education, and the Missouri Department of Health and Senior Services. Representatives from Feeding Missouri and Missouri's food banks, including Second Harvest, Harvesters, Ozarks Food Harvest, Southeast Missouri Food Bank, St. Louis Foodbank, Operation Food Search, and The Food Bank for Central and Northeast Missouri, also provided data for this publication.

Background

This atlas assesses the extent of food insecurity in the state of Missouri. It also gauges how well public programs are doing in meeting the needs of our fellow citizens who have difficulty acquiring sufficient amounts and qualities of food. The concept of food security, as the Food Assistance and Nutrition Research Program within the United States Department of Agriculture defines it, refers to “access by all people at all times to enough food for an active, healthy life.” Food insecurity in this country is normally due to insufficient resources for food purchases, and most food-insecure households avoid hunger by relying on a narrower range of foods or acquiring food through private and public assistance programs.

In 2023, the year in which most of the data for this atlas is from, 13.5 percent of all Americans, or an estimated 47.4 million people, lived in food-insecure households. This is a greater than 30 percent increase from 2021. A reported 17.9 percent of all households with children experienced food insecurity. Households experiencing “very low food security,” formerly labeled as “food insecure with hunger,” accounted for 5.1 percent of households, meaning the food intake of some household members was reduced and their normal eating patterns were disrupted because of the lack of money and other resources.

The costs of food insecurity are economic, social, physical and psychological. For example, the economic costs of food insecurity among adults include income loss, work absenteeism, higher demand for public benefits and social services, and increased health care expenditures. Food

insecurity and poverty are clearly connected. Poverty is the best single predictor of food insecurity, and hunger strongly correlates with lower educational achievement, unemployment, and impaired work performance. Recent studies of children show food insecurity and hunger are significant predictors of chronic illness, low birth weight, lower school performance, and developmental problems.

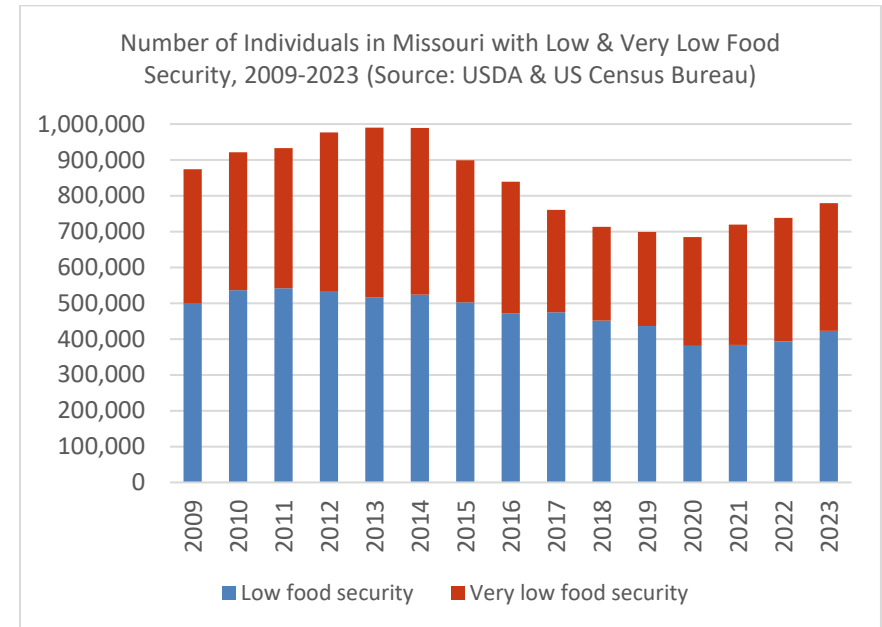

Figure 1

Missouri’s statistics (see *Figure 1*), after improving between 2015 and 2020, show an increase in the total number of people impacted by food insecurity between 2020 and 2023. An estimated 779,000 people are food insecure in Missouri. Of those, approximately 356,000 experience very low food security or hunger. Between 2021 and 2023 (see *Figure 2*), an average of 12.7 percent of Missouri households

experienced food insecurity, an increase of 10 percent compared to 2018 to 2020. Meanwhile, 5.8 percent of households experienced very low food security, an increase of 14 percent compared to 2018 to 2020).

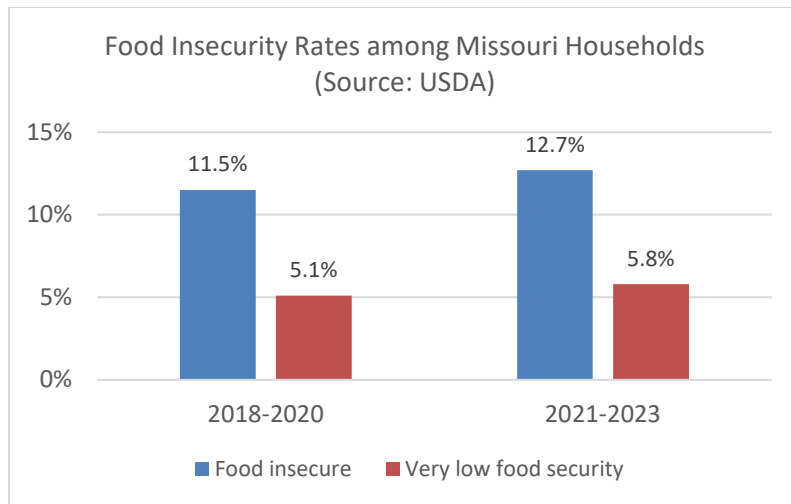

Figure 2

In Missouri, food insecurity and hunger continue to challenge our state. While COVID-19 pandemic era monetary assistance programs provided important support for many struggling families, the conclusion of those programs coupled with rising food costs and inflation has led to a significant rise in food insecurity.

Goals

To help Missourians gain a greater understanding of food insecurity and hunger in the state, researchers at the University of Missouri's Interdisciplinary Center for Food Security compiled county-level data to provide (1) a snapshot of the extent and depth of food insecurity and hunger (*which we refer to as "need" in this atlas*) and (2) an assessment of participation in programs intended to mediate food insecurity and hunger (*labeled as "performance" in this atlas*). With the cooperation of many public and private sector agencies and organizations, we identified appropriate variables or indicators for this analysis for each of Missouri's 114 counties and the City of St. Louis.

The goals of the Missouri Hunger Atlas include the following:

- Raise Missourians' awareness of the extent and depth of food insecurity and hunger needs in their own locations and in other regions of the state.
- Increase Missourians' knowledge of the extent of the work of public programs and food banks in their regions and the success of these programs in reaching food-insecure populations.
- Reveal geographic patterns, including regional and county-level differences, in hunger need and performance in our state.

- Provide measures of need and performance that can be updated on a periodic basis and compared to assess trends in need and performance variables.
- Help public and private decision-makers assess food insecurity need and program performance as a means for improving the delivery of human, technical, and fiscal resources to residents and regions requiring assistance.

This publication is consistently a “work in progress.” We welcome comments and suggestions from readers and users. People might identify different sets of indicators than those described here, for example, or may have creative ideas for more effective presentations of the findings. Our goal is to have this atlas used by diverse groups in Missouri and outside our state. We sincerely hope that dialogue about both our methods and results become part of wider discussions. Please [contact us](https://foodsecurity.missouri.edu/contact-us) (foodsecurity.missouri.edu/contact-us) with questions or comments.

Reading the Atlas: County Tables & State Maps

This atlas presents information on indicators that measure both food insecurity and program success in meeting people’s needs. We have identified seven indicators related to “need” and ten measures of “performance.” Depending on the variable, our measures focus primarily 2023 data, the most recent data available at time of publication, using either the calendar year, the state fiscal year (July 1 - June 30), or federal fiscal year (October 1 - September 30). In the county pages which make up the bulk of this report, readers will find

county-level information on (A) demographic, health, and economic indicators, (B) need indicators, and (C) performance indicators.

The next few pages of this atlas provide an overview of these three categories, as well as important information on how to read the county tables. This section also includes information on how to read the state maps included in this atlas.

County Profile Indicators

At the bottom of each county page are three types of indicators under the County Profile heading: demographic, health, and economic. These give readers a general profile of the county context. We present health variables due to the close correlations between food security, diet, and health status. Within the economic indicators, we include three poverty measures as poverty is the best predictor of food insecurity in the United States. Median household income, unemployment rate, percentage of single-parent households, and food affordability are additional measures of economic well-being included in this section.

Need and Performance Indicators

The purpose of the “Need Indicators” is to provide measures of the extent of food insecurity and hunger in each Missouri county and the City of St. Louis. The “Performance Indicators” provide county-level measures of the extent to which residents are participating in public and private programs intended to help people cope with food insecurity. Knowing county needs, we can examine the success of programs established to address those needs.

How to Read the County Tables

At the top of the County Table, seven indicators of food insecurity and hunger need are presented under the Need Indicator heading. Three columns of information are presented for each variable. To demonstrate how to read this information (see *Figure 3*), here is the first Need Indicator, percentage of individuals food insecure, for Linn County (see page 90 for complete table):

- The *first column*, “County,” reports the result for the county on this indicator; in this case, 16.1 percent of Linn County’s total population is food insecure.
- The *second column*, “State,” shows the average for the entire population of Missouri, in this case 15.4 percent.
- The *third column* is labeled “Rank.” This last column indicates the county’s rank in comparison with all other

Missouri counties and the City of St. Louis. Individual county results are normally divided into five quintiles to reveal if a county’s need or performance level is in the top 20 percent, second highest 20 percent, and so on. The labels under “rank” indicate the following groups:

- Very High: 80th to 100th percentile
- High: 60th to 79th percentile
- Average: 40th to 59th percentile
- Low: 20th to 39th percentile
- Very Low: 1st-19th percentile

The example on page 90 shows the level in Linn County, in comparison to other counties, is in the middle quintile in terms of the percentage of individuals who are food insecure.

NOTE: County rankings are not compiled for every indicator.

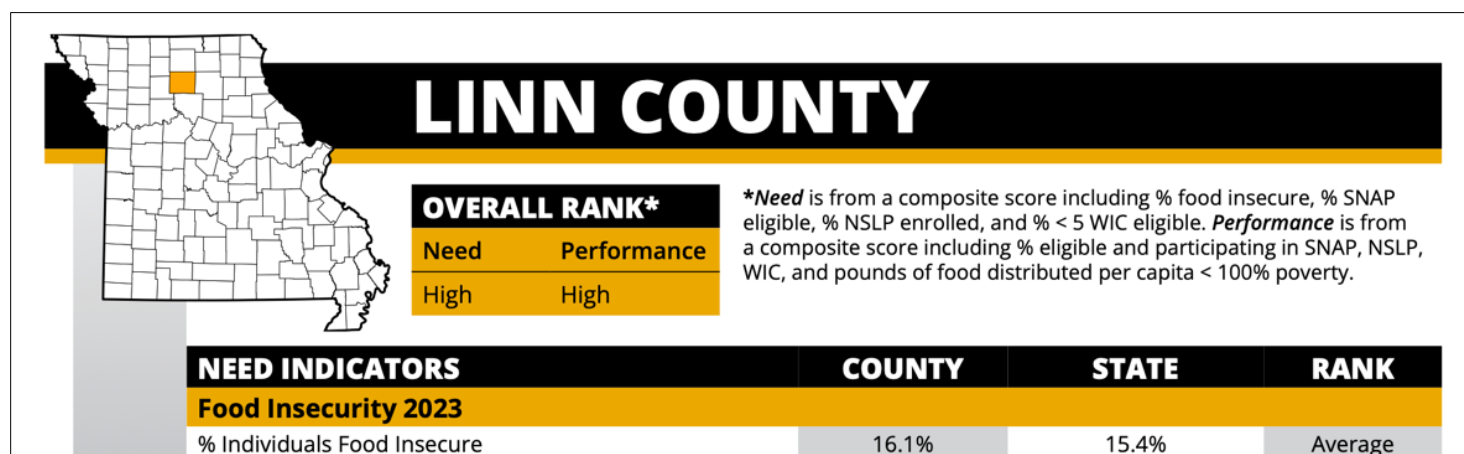

Figure 3

State Maps

For some indicators of hunger need and performance, we provide maps to visually show patterns among Missouri's 114 counties and the City of St. Louis. The maps allow the reader to quickly note the rankings of all counties in the state.

Each map divides the state into five equal fifths, or quintiles, according to the complete results for the measure. A quintile includes one-fifth, or 23, of the counties in the state.

The quintiles on each need and performance indicator map are arranged from very low (the 23 counties with lowest need or performance on that measure) to very high (the 23 counties with highest need or performance). For example, the percentage of individuals food insecure in the county ranges from a state low of 10.9 percent (St. Charles County) to a high of 23.1 percent (Wayne County). To make the state map of the percentage of individuals food insecure, the 23 counties with the lowest levels of food insecurity (10.9 – 14.6 percent) are in the first, or lowest quintile. The second quintile includes the 23 counties with the next lowest in levels of food insecurity, with rates from 14.6 to 15.9 percent. This pattern continues to the fifth quintile, or highest food insecurity group, which includes 23 counties with food insecurity rates from 18.4 to 23.1 percent.

Final Notes

This atlas emphasizes percentages rather than absolute numbers. In other words, most of our indicators reveal the percentage of a county's population that is food insecure or eligible for a particular program. With this approach, we can

compare need and performance measures between counties with different population numbers. However, it is important to remember that emphasizing percentages and comparatively assessing need and performance percentages between counties can cloak important differences in the absolute numbers of people affected by any single variable. The large proportion of people in Missouri's highest populated counties, including the City of St. Louis, St. Louis County, and Jackson County, means that the total number, rather than percentage, of people who are food insecure, eligible for a program, or participating in a program are almost always higher than counties with lower percentages. St. Louis City, for example, appears to be doing well in participation rates for specific programs and has a higher participation rate than many other counties with lower numbers of eligible participants. However, a participation rate of 80 percent in a highly populated county may mean that more people remain nonparticipants than in a county with a lower population and 70 percent participation rate. Similarly, a rate of eligibility for a program may be lower in a highly populated county than in a less populated area, but there may well be more individuals eligible in the former county due to the high number of residents.

The next three sections of this report present the indicators readers will find on the county pages. The major sections include the County Profile Indicators, Need Indicators, and Performance Indicators. Descriptions include the name of the indicator, how it is measured, and the source of the data. State maps are also provided for select indicators, including a Need vs. Performance map which compares overall need vs. overall performance.

Food Affordability (MAP)

An estimate of the percentage of income required each week by households in 2023 to meet average expenditures for food.

Sources: Small Area Income and Poverty Estimates (SAIPE), U.S. Census Quick Facts, Feeding America, 2023 Map the Meal Gap

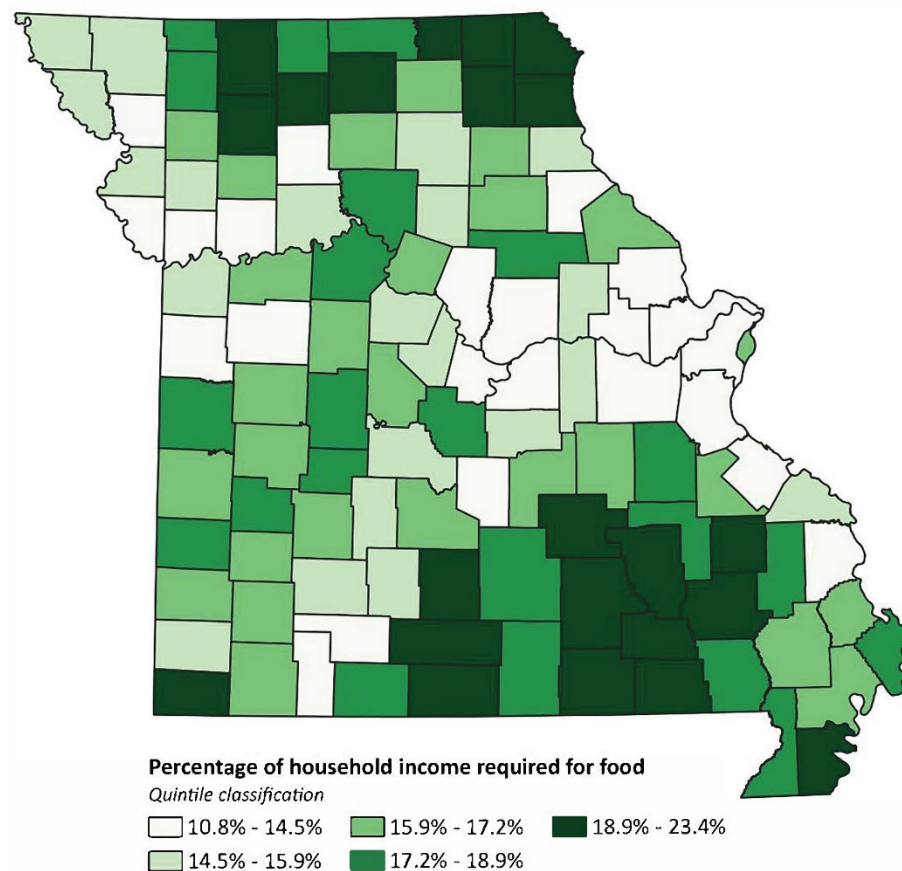

To better understand the context of rising food insecurity in Missouri, a new economic indicator, Food Affordability, was introduced in the 2013 edition of the Missouri Hunger Atlas.

Low-income households must often make tough choices about how to spend their money, which may ultimately lead to smaller amounts of household funds available for food expenditures. Likewise, higher food costs significantly limit household food choices. Therefore, the percentage of income needed to meet basic household food needs is an important determining factor in the quantity, quality, and types of food families purchase

The food affordability indicator is a county-level estimate of the percentage of income required for food each week. It is calculated using the median household income divided by the average household size and then divided by 52 to obtain the average weekly median household income. The average costs of meals, obtained from Feeding America, were multiplied by 21 meals each week, assuming three meals each day. This number was then divided by the average weekly median household income and multiplied by 100 to obtain a percentage of weekly income needed to purchase food for a household.

SNAP (Food Stamp) Program

Percentage Total Population Income Eligible (MAP)

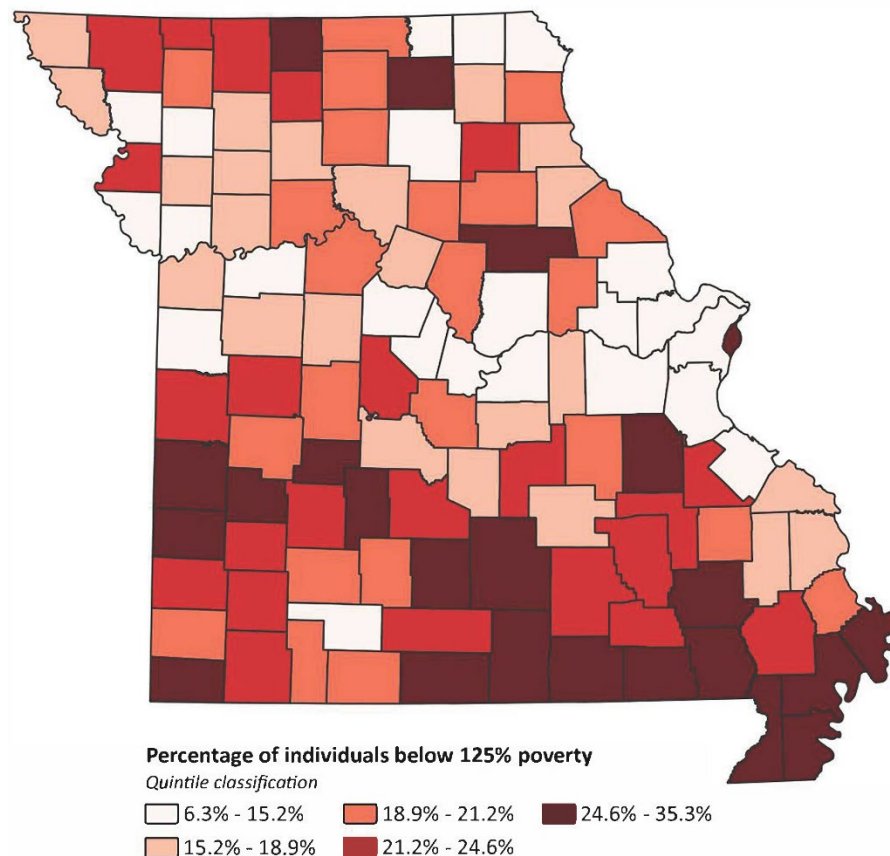

Estimated percentage of total population income eligible for participation in the Supplemental Nutrition Assistance Program (formerly Food Stamps). Household income of less than 130 percent of the Federal Poverty Level (FPL) is the primary eligibility requirement for SNAP¹. However, our measure uses 125 percent of FPL to compensate for other disqualifying criteria and to avoid overestimation of eligibility. *Source: 2019-2023 American Community Survey 5-year Estimates, U.S. Census Bureau*

SNAP (FOOD STAMP) PROGRAM	
MISSION	To improve the diets of low-income households by increasing food access and food purchasing ability
CONSTITUENCIES	All ages
ELIGIBILITY	Primarily household-level income $\leq$ 130 percent of poverty levels plus restrictions based on immigrant status in U.S. and household asset levels
RESOURCES PROVIDED	Direct food payments using an Electronic Benefit Transfer card
STATE LEAD	Missouri Department of Social Services, Family Support Division

¹ The program has other eligibility requirements that modify the number of households eligible. Although there are various ways to estimate these

SNAP (Food Stamp) Income Eligible

Missouri Hunger Atlas 2025

additional restrictions, the data needed to approximate these adjustments are not currently available at the county level.

Percentage Under 18 Income Eligible (SNAP)

Estimated percentage of total population less than 18 years of age income eligible for participation in the Supplemental Nutrition Assistance Program (formerly Food Stamps Program). Household income of less than 130 percent of the Federal Poverty Level (FPL) is the primary eligibility requirement for SNAP. However, our measure uses 125 percent of FPL to compensate for other disqualifying criteria and to avoid overestimation of eligibility. *Source: 2019-2023 American Community Survey 5-year Estimates, U.S. Census Bureau*

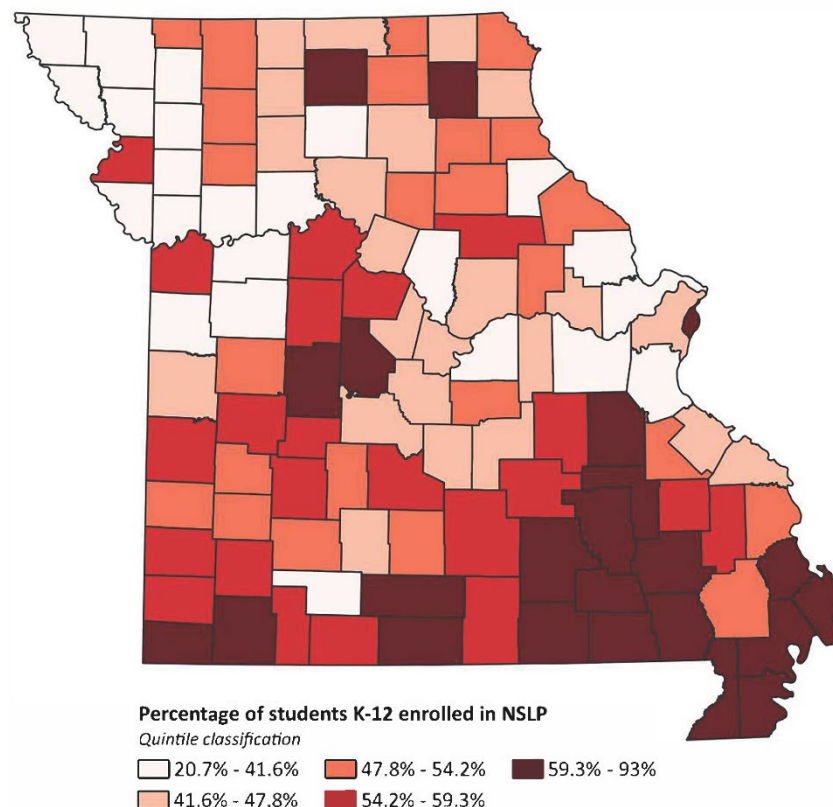

National School Lunch Program

Percentage of K-12 Students Enrolled in Free and Reduced-Price Lunch (MAP)

Percentage of students enrolled to receive free or reduced-price lunches in the National School Lunch Program (NSLP) in the 2023-2024 school year. Analysis only includes students in public and charter schools, which account for 99 percent of all students participating in NSLP. *Source: Missouri Department of Elementary and Secondary Education, October 2023.*

Free and Reduced-Price Lunch Enrollment (NSLP)

Missouri Hunger Atlas 2025

Women, Infants and Children (WIC) Program

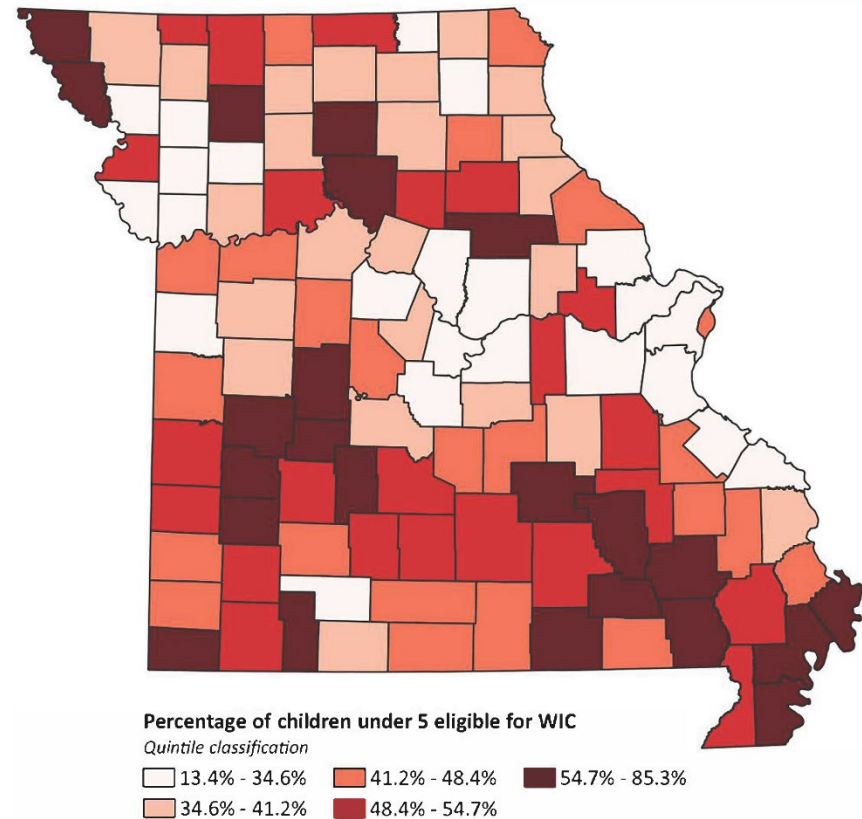

Percentage of Children Under Five Income Eligible

Percentage of total infants and children under five years of age whose household incomes are under 185 percent of the Federal Poverty Level. *Source: 2019-2023 American Community Survey 5-year Estimates, U.S. Census Bureau*

WOMEN INFANTS AND CHILDREN PROGRAM	
MISSION	To safeguard the health of low-income women, and infants and children younger than 5 years, who are at nutritional risk
CONSTITUENCIES	Pregnant women, non-breastfeeding women up to 6 months postpartum, breastfeeding women up to one year postpartum, infants, and children up to fifth birthday
ELIGIBILITY	Categorical, residential, income and nutrition risk eligibility requirements. ≤ 185 percent of Federal Poverty Level. Some individuals are adjunctively eligible by participating in Medicaid with a household income >185 percent of the Federal Poverty Level.
RESOURCES PROVIDED	Food, nutrition education, and referrals to health care and social service providers
STATE LEAD	Missouri Department of Health and Senior Services

Percentage of Children Under Five Income Eligible for WIC

Missouri Hunger Atlas 2025

Overall Need Rank

The overall need rank is a single composite measure of food insecurity needs for each county. While seven need indicators are listed in each county table, we chose four of these to establish a composite measure of need. The four variables, which include overall measures of food uncertainty as well as county-level eligibility for participation in the primary public food assistance programs, include the following:

Percentage of Population Food Insecure

Percentage of total population who are food insecure in 2023.

Percentage of Total Population Income Eligible for SNAP/Food Stamps

Percentage of county residents whose income falls below 125 percent of the Federal Poverty Level (based on 2019-2023 five-year estimate).

Percentage of K-12 Students Enrolled in Free and Reduced-Price Lunch (NSLP)

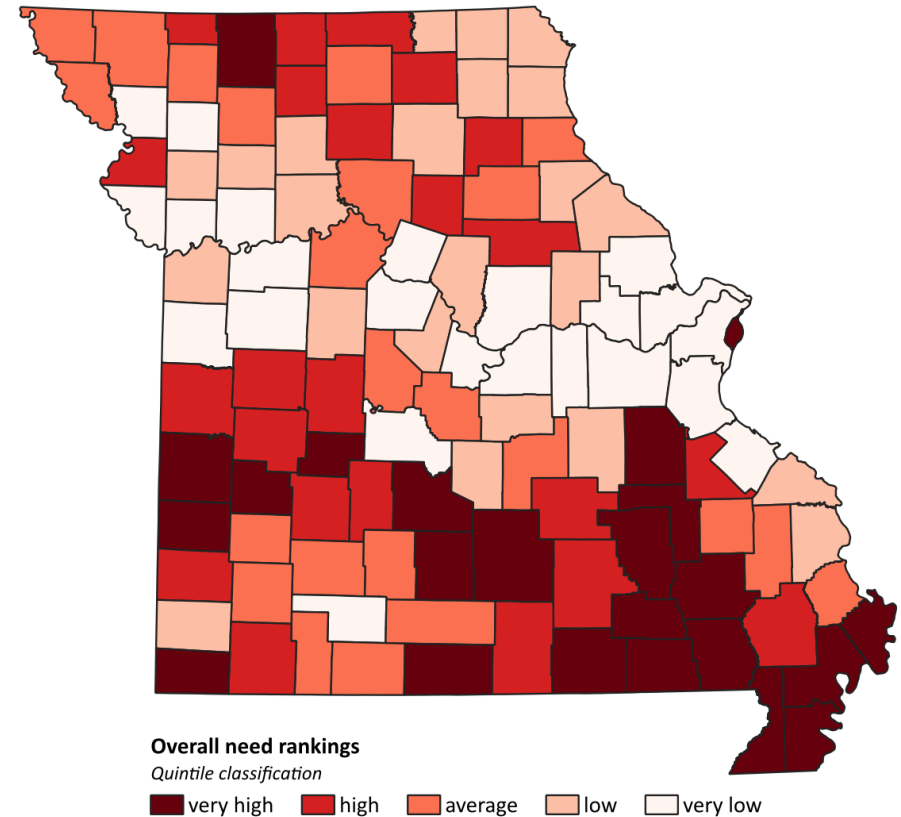

Percentage of K-12 students enrolled to receive free or reduced-price lunches (public and charter schools only) in the National School Lunch Program, 2023-2024 school year.

Percentage of Children Under Five WIC Eligible

Percentage of total infants and children under five years of age whose household incomes are under 185 percent of the Federal Poverty Level (based on 2019-2023 five-year estimate).

Overall Need Rankings

Missouri Hunger Atlas 2025

Beginning with the individual county rankings for food insecurity, SNAP eligibility, NSLP free and reduced-price lunch enrollment, and WIC under 5 eligibility, we use two steps to establish a county's overall need rank. First, we combined the four variable ranks to establish a composite score. Rather than use a simple average of the four variable ranks, we assigned a weight to each rank in the construction of the composite score. Variables of percentage of population food insecure and percentage of population income eligible for SNAP benefits were assigned higher weights due to the greater percentage of population affected by these variables.

In brief, the weighting model includes the following:

- 30 percent of the composite score to each of the following measures:
 - Percentage of households food insecure
 - Percentage of total population eligible for SNAP/Food Stamps
- 20 percent of the composite score to both of the following:
 - Percentage of K-12 enrollment in free and reduced-price lunch (NSLP)
 - Percentage under five years of age eligible for WIC

For example, suppose a county had ranks of 17, 19, 91, and 22 for these four variables. The county's composite score, based on the weighted model and rounded off to the nearest whole number, would be 33. The second step of the process is an overall state ranking of the composite scores in which the composite scores of the 115 locations are compared to each other. In keeping with our ranking scale, in which

1=highest need and 115=lowest need, the county with the lowest numerical composite score is assigned 1 in the overall need ranking, which suggests the highest overall need among counties. Similarly, the county with the highest composite score is assigned number 115, which signifies the lowest overall need among counties. In our example case, the composite score of 33 ranks as the 29th highest in the state, which places the county in the second highest quintile (labeled "high") for Missouri.

Performance Indicators

SNAP (Food Stamp) Participation

Number of Monthly Participants

Average number of total county residents who used food stamps each month in Missouri FY2023 (July 1, 2022 – June 30, 2023). *Source: Missouri Department of Social Services*

Percentage of Total Population Using SNAP

Average percentage of total county population who used food stamps each month in FY2023. *Source: Missouri Department of Social Services*

Percentage Income Eligible and Participating (MAP)

Percentage of county residents eligible for food stamps in FY2023 who participated in the program.

Sources: Missouri Department of Social Services and 2019-2023 American Community Survey 5-year Estimates, U.S. Census Bureau

Number of Monthly Participants Under 18

Average number of county residents < 18 years of age who used food stamps each month in FY2023.

Source: Missouri Department of Social Services

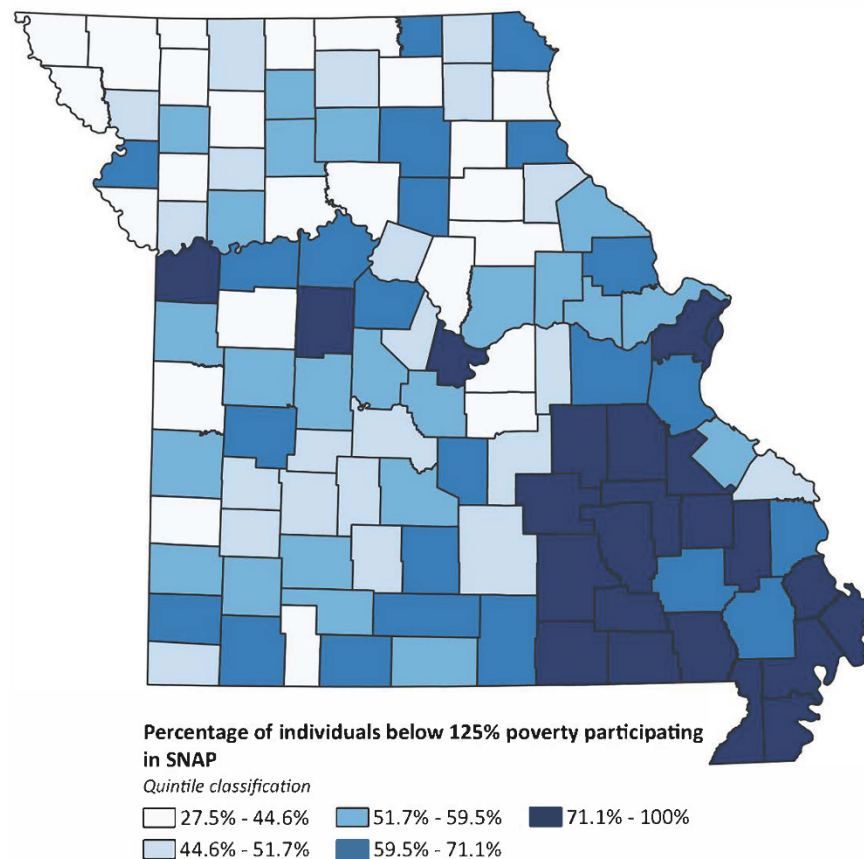

Percentage of Under 18 Population Participating

Average percentage of county population under 18 years of age who used food stamps each month in FY2023.

Source: Missouri Department of Social Services

Percentage of Income Eligible Population Participating in SNAP

Missouri Hunger Atlas 2025

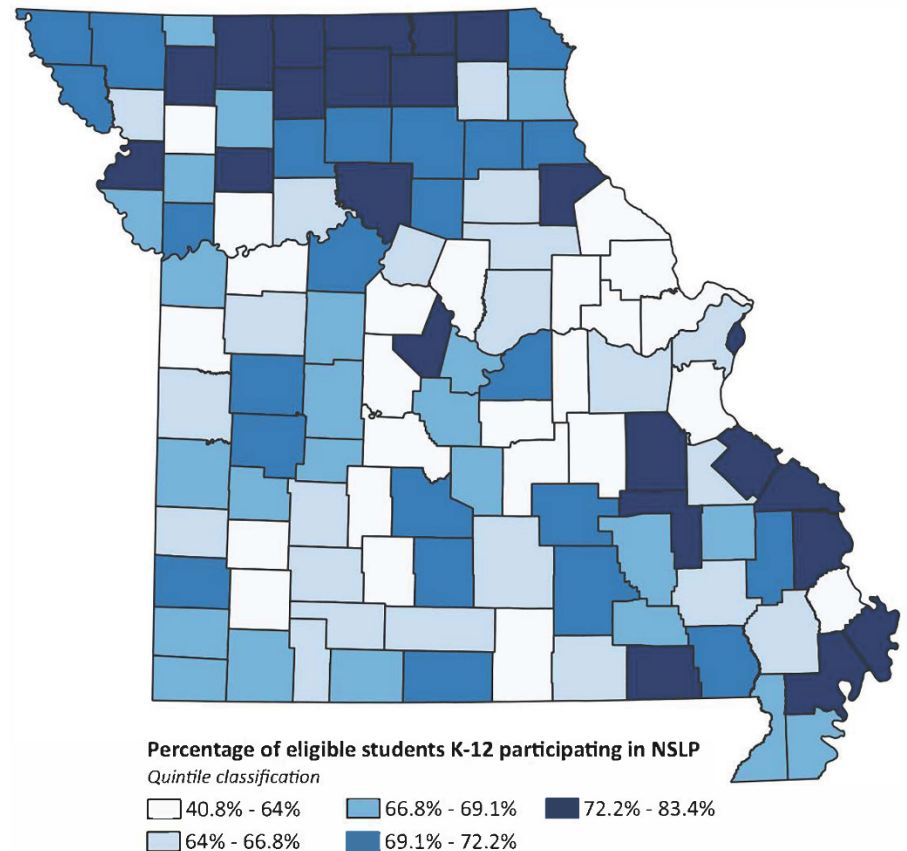

National School Lunch Program Participation

Percentage Enrolled and Participating (MAP)

Estimated percentage of students enrolled for free or reduced-price lunches who participated in the program in the 2023-2024 school year. Technically, this indicator is a proxy based on the actual number of free and reduced-price lunches served compared to the maximum (potential) number of free and reduced-price lunches that could be served to those students enrolled in the program. *Source: Missouri Department of Elementary and Secondary Education, October 2023*

Percentage of Students Enrolled and Participating in Free and Reduced-Price Lunches (NSLP)

Missouri Hunger Atlas 2025

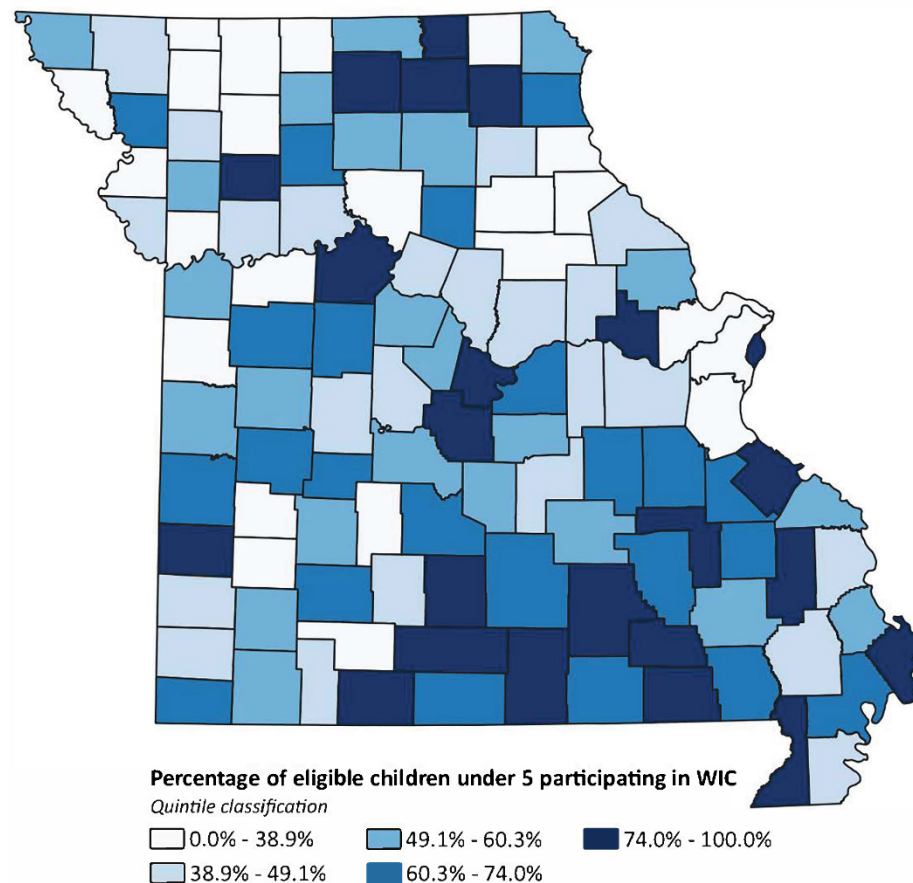

Women, Infants and Children (WIC) Program Participation

Number of Children Under Five Participating, Monthly
Average monthly number of infants and children enrolled in program during the Federal Fiscal Year 2023 (October 1, 2022 – September 30, 2023). *Source: Missouri Department of Health and Senior Services*

Percentage of Eligible Children Under Five Participating (MAP) Percentage of eligible infants and children under five years of age who are participating in WIC in Federal Fiscal Year 2023. *Sources: Missouri Department of Health and Senior Services and 2019-2023 American Community Survey 5-year Estimates, U.S. Census Bureau*

Percentage of Eligible Children Under Five Participating in WIC

Food Bank Distributions

Total Pounds in County

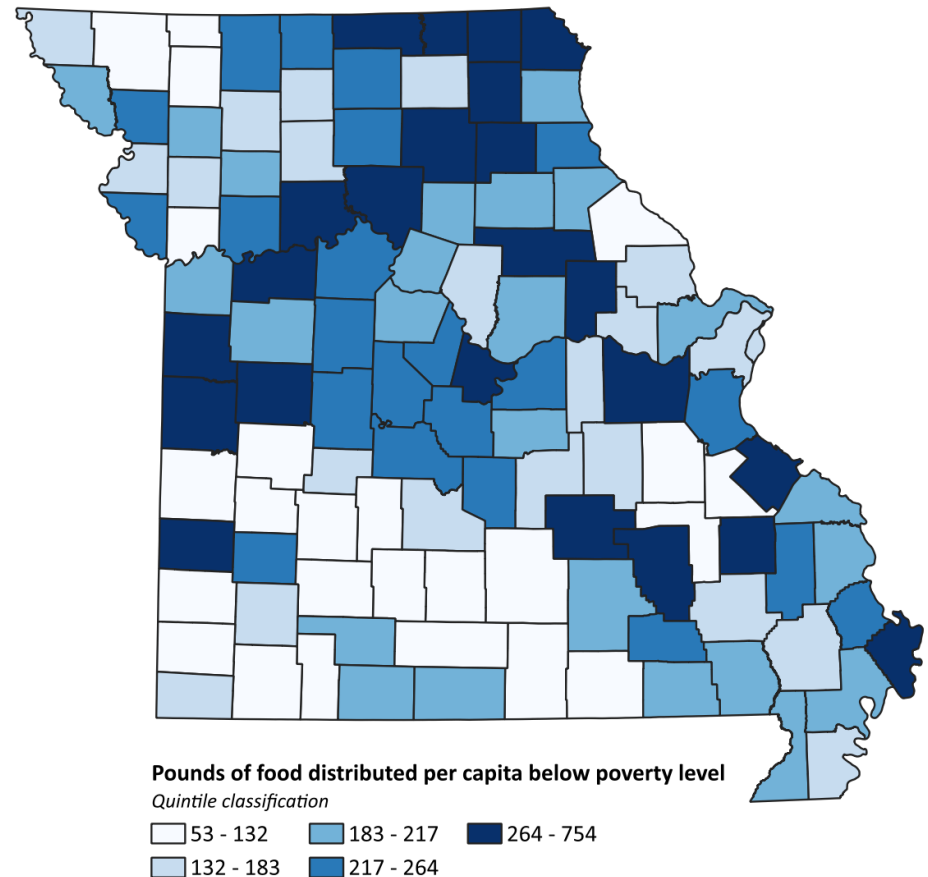

Total amount of pounds of food (including USDA commodity foods but excluding food for congregate meals and backpack programs) distributed from regional food banks to food pantries in the county during 2023. *Sources: The Food Bank for Central and Northeast Missouri, Harvesters: The Community Food Network, Ozarks Food Harvest, Saint Louis Area Foodbank, Second Harvest Community Food Bank, Southeast Missouri Food Bank, Operation Food Search*

Pounds of Food Distributed per Capita Below Poverty Level (MAP)

Number of pounds of food distributed per person in poverty to food pantries in the county by regional food banks in 2023. *Sources: The Food Bank for Central and Northeast Missouri, Harvesters: The Community Food Network, Ozarks Food Harvest, Saint Louis Area Foodbank, Second Harvest Community Food Bank, Southeast Missouri Food Bank, Operation Food Search and 2019-2023 American Community Survey 5-year Estimates, U.S. Census Bureau*

Pounds of Food Distributed by Food Banks Per Capita Below Poverty

Missouri Hunger Atlas 2025

Overall Performance Rank

We constructed an overall performance rank for each county. We selected four indicators (from the 15 performance measures included for each county) to establish a composite measure of performance. The four variables include participation rates for three primary public programs and one measure of private program activity.

Percentage of income-eligible residents who received SNAP/food stamps

Estimated percentage of total population with incomes less than 125 percent of the Federal Poverty Level who participated in SNAP in FY2023.

Percentage of students enrolled and participating in free and reduced-price lunches (NSLP)

Percentage of students enrolled for free or reduced lunches who participated in the program in the 2023-2024 school year.

Percentage of income eligible infants and children receiving WIC benefits

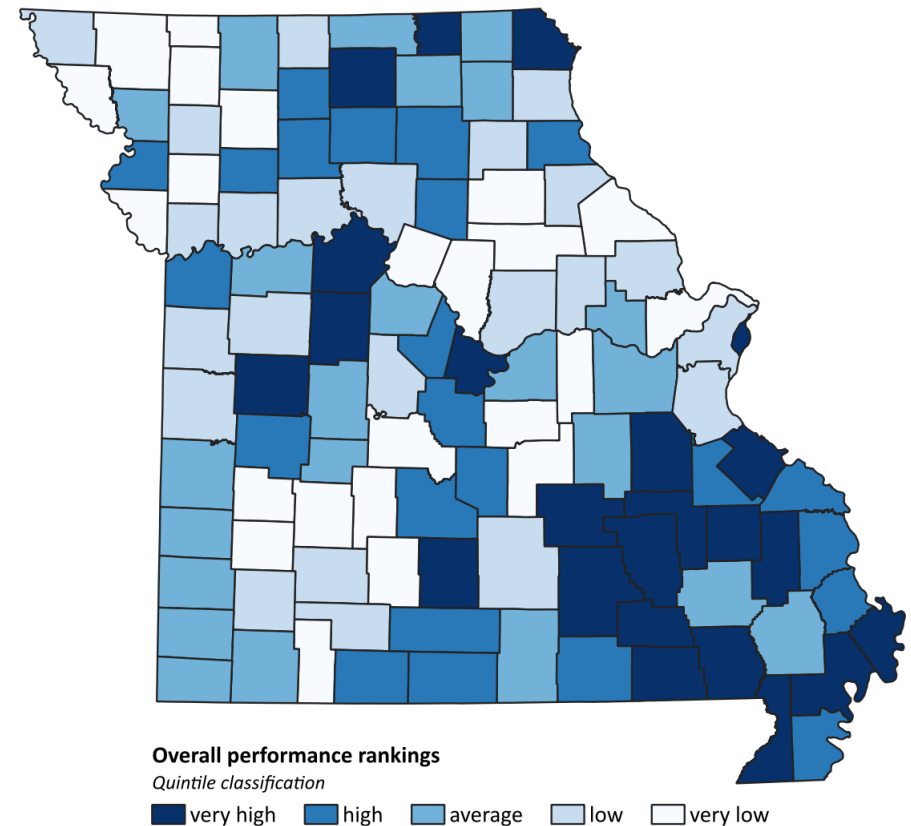

Percentage of income eligible infants and children under five years of age in FY2023 who were enrolled in WIC.

Pounds of food distributed per capita < 100 percent poverty

Number of pounds of food distributed per person in poverty in 2023.

Overall Performance Rankings

Missouri Hunger Atlas 2025

We use the individual county rankings for SNAP participation, NSLP participation, WIC participation, and pounds of food distributed per person in poverty to establish a composite rank score. As with the overall need ranks, rather than using a simple average of the four variable ranks, we assigned a weight to each rank in constructing the composite rank score. SNAP participation is weighted the most because it affects the largest population group; food bank distributions are given the lowest weight in our formula because emergency food distribution sources are dependent on a variety of input sources other than food banks.

In brief, the weighting model includes the following:

- 35 percent of the composite rank:
 - SNAP (Food Stamp) participation as percentage of total population eligible
- 25 percent each to the following variables:
 - Free and reduced-price lunch (NSLP) participation as a percentage of total school population enrolled
 - WIC participation among children < 5 as a percentage of the eligible population
- 15 percent of the composite rank:
 - Pounds of food distributed per person in poverty by the regional food banks

We place the most weight on the SNAP variable as this program is by far the most extensive in the state and addresses all age groups. We place lower emphasis on the food bank distributions because the food banks are only one source of supply for local food pantries and on-site meal providers, and we have no comprehensive measure of total

private assistance in the state. Again, using a hypothetical case, suppose the county had ranks of 106, 64, 64, and 48 respectively for these four variables. The county's composite score, based on the weighted model and rounded off to the nearest whole number, is 77. The second step of the process is an overall state ranking of the composite performance scores in which the composite scores of the 115 locations are compared to each other. In keeping with our performance rank scale, where 1=highest performance and 115=lowest performance, the county with the best, or lowest, numerical composite score is assigned 1 in the overall performance rank, which suggests the highest overall performance in that county. Similarly, the county with the highest average composite score is assigned 115, which signifies the lowest overall performance. In this case, the composite score of 77 would rank as the 98th highest in the state, and so it is ranked in the lowest, or —very low, quintile.

Comparing Need and Performance

Having compiled county-level composite ranks in the areas of food insecurity and hunger need and program performance, a final and useful step is to compare how each county ranks in terms of the combination of their ranks on need *and* performance. In essence, we can ask whether counties that have high need are doing comparatively well or comparatively poorly in addressing those needs. Counties with high needs that have high performance rankings, for example, are likely more successful in serving the needs of their food insecure populations while counties with high needs but low performance are potential target locations for increased public and private sector attention.

We used several steps to perform this analysis. First, we labeled counties as high need if their composite need rank fell in the upper two quintiles (very high or high) of need. We designated counties as low need if their composite need rank fell in the lowest two quintiles (low or very low) of need. Similarly, we labeled counties as high performance if their composite performance ranks fell in the upper two quintiles (very high or high) of performance. We designated counties as low performance if their composite performance ranks fell in the lowest two quintiles (low or very low) of performance. We did not include counties that scored in the average, or middle, quintile in either of these composite ranks in this analysis, but they are included in the map.

The designation of counties as either high need or low need, and as either high performance or low performance, offers the possibility of counties falling into one of four categories:

- (1) high need/high performance
- (2) high need/low performance
- (3) low need/high performance
- (4) low need/low performance

As shown in the map and table (Figure 4) on the following page, this analysis yielded some interesting results. Twenty-three counties and St. Louis City have both high need and high performance. However, nine counties were labeled high need and low performance. We have no way of knowing whether public and private agencies are having difficulty targeting resources to these high need/low performing counties, but trends reveal that recent economic conditions have taken their toll on Missouri counties. These counties are concentrated in northern Missouri and southwestern Missouri. This could suggest focusing more individual attention on service delivery in these counties.

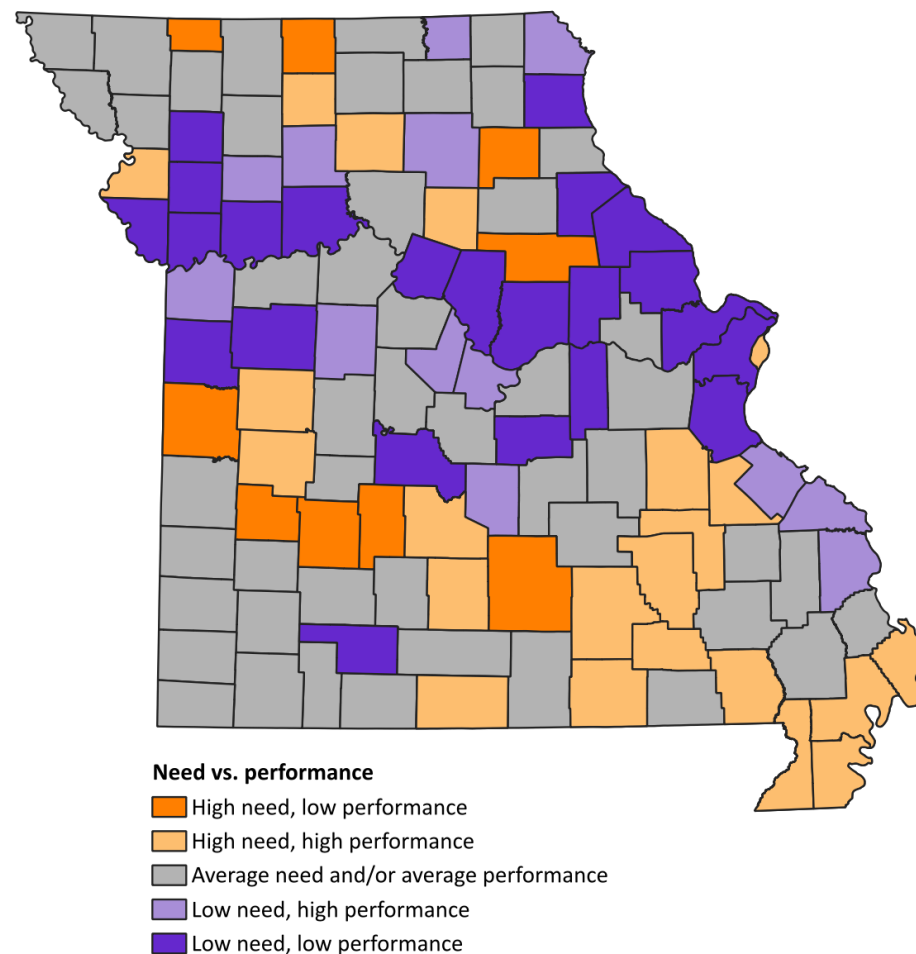

We found 13 counties qualifying as low need and high performance. In these areas, the results suggest that service providers are adequately handling food insecurity and hunger needs in their regions.

High Need/High Performance		High Need/Low Performance

Figure 4

Need vs. Performance

Missouri Hunger Atlas 2025

At the other end of the spectrum are 23 counties that have comparatively low percentages of populations with hunger needs but are also doing comparatively worse in meeting the requirements of these populations. Many of these counties are in relatively affluent regions near all of Missouri's major cities. Although the percentage in need is relatively low in these areas, in many cases the low percentages denote relatively large numbers of people because the base populations are often quite high (e.g. St. Charles County).

While the Missouri Hunger Atlas cannot scientifically prove why these counties are subject to low performance, we can offer a couple of explanations that could be tested with more research. First, residents living in regions with high levels of need and visible public programs might experience less social shame or stigma as participants in public programs. If one lives in a region in which sizeable proportions of a population regularly participate in public programs, an individual or family's choice to similarly participate would be in line with others' decisions and be subject to less social angst or difference. On the other hand, residents of regions with high levels of social and economic inequality and smaller percentages of program participation might face social discomfort or ostracism related to participation. A student who is one of a limited number of persons qualifying for free lunches or a shopper who is one of a small group that separates items at a supermarket for WIC participation would be required to demonstrate a lower economic status in a public context in which such status contrasts with that of the majority.

A second possible explanation is that public and private agencies have made logical decisions to focus scarce human, technical, and financial resources in high-need areas. As a consequence, programs in low-need areas have a more difficult time conducting the type of outreach and education to attract high participation rates among eligible residents in their counties.

Concluding Remarks

Food insecurity and hunger continue to be facts of life for far too many Missourians. Feeding America's assessment that 15.4 percent of Missouri households were food insecure in 2023 suggests that around 951,000 individuals faced uncertainty in acquiring sufficient food, reduced the quality and variety of their diets, or at times did without food during the year. Further, the USDA estimates that 5.8 percent of households in Missouri experienced very low food security (prior to 2007 labeled as "food insecure with hunger") in 2023. This translates into roughly 150,000 households, or 356,000 Missourians, who experienced hunger in our state.

Food banks and pantries in the state report increasing demand. Participation in SNAP, NSLP, and other public programs remains high, while WIC participation lags. The economic recovery in the decade following the Great Recession (2010-2020) helped many families and brought down U.S. and Missouri levels of food insecurity and public program participation from historical highs. During the COVID-19 pandemic, there was a drop in food insecurity rates as federal monetary assistance to households grew substantially; specifically, SNAP benefits increased, and economic stimulus payments were made to households (Wolfson & Leung, 2024). Simultaneously, household costs began to increase. After a period of low inflation through 2021 (1.2 percent in 2021), inflation rates in the Midwest rose to 7.9 percent in 2022 and by another 6.0 percent in 2023. For households with lower incomes, especially those with more fixed incomes, food intake is often affected the most given that expenses for housing, transportation, and health care are higher priorities. Yet, as federal assistance waned (Rosenbaum, Bergh, & Hall, 2023), and food costs rose due to inflation (Stewart, Dong, & Grigsby-Calage, 2025), food insecurity rates increased in 2021 beyond pre-pandemic levels. Since food insecurity levels mimic the rise and fall of poverty levels, the most direct first step to alleviating hunger is to develop successful strategies for raising the incomes of those who are poor. Reversing poverty is more difficult, however, for individuals and households in which adult members are elderly or disabled or who, for various reasons, are unable to utilize salaries and wages for food purchases.

The establishment of public and private programs and activities is a necessary safety net response to meeting the short-term needs of food insecure and hungry citizens who inhabit every county and corner of our state. These programs do not provide a long-term solution to the factors that lead to hunger, but they are critical to ameliorating the day-to-day struggles of hundreds of thousands of Missourians.

It is not our goal to editorialize on whether public and private support for food assistance programs is too high or too low. Certainly, we know that estimated costs of food insecurity in Missouri typically underestimate the total costs of this social problem in at least three important ways:

- The programs included in this atlas are not comprehensive of the financial and human resources being brought to bear on hunger and food insecurity. For example, it is very difficult to comprehensively document contributions from the private sector. Our report documents only food distributed through Missouri food banks including Operation Food Search and those affiliated with Feeding Missouri and Feeding America, yet most local food pantries and meal-providing institutions rely on these food banks for only a portion of the food they provide to clients. And certainly, there are many other faith-based organizations, civic groups, and other organizations that provide food for residents in need without using food banks at all.
- A comprehensive understanding of the costs of food insecurity would also properly include the administrative and organizational costs of operating these programs. We can document the amount of benefits provided through SNAP and WIC, and the reimbursements given to schools for free and reduced lunches; however, one would have to also include the hundreds of positions at state agencies and in county governments that are necessary to operate these efforts, monitor participation, solicit and evaluate perspective participants, and conduct the dozens of other tasks necessary for their operation.
- Most significantly, the costs of food insecurity and hunger are critically underestimated if these are understood solely as the costs of providing assistance directly related to the acquisition of sufficient amounts of food. The costs of hunger should properly include the health care costs incurred because children and adults are more susceptible to, and recover more slowly from, disease and illness. It should include the health care costs for the management of chronic diseases, such as diabetes and hypertension, which are brought on in part by the reliance on less expensive foods, which tend to be high calorie, high fat, and low nutrient-dense foods. The costs of hunger extend to the costs of lower work productivity and missed days of work. And the costs of hunger include the social and psychological angst of not having sufficient and nutritious foods and the mental stress and discord that results for individuals and households. As much as poverty is a leading cause of food insecurity, so too are food insecurity and hunger leading causes of continued poverty.

Looking over the data of the last three Missouri Hunger Atlases (see the Figure 5 on the next page), there are some positive and some negative trends. (Readers are reminded that the year reported in the Missouri Hunger Atlas typically predates the year of publication by two years due to the lag in data reporting.) As noted, the negative effects of the Great Recession beginning in 2008 have been largely mitigated. The statewide poverty rate is holding steady, despite unique challenges in the wake of the COVID-19 pandemic. Simultaneously, the reported state food insecurity rate jumped significantly in the most recent atlas when compared with the previous two editions.

Missouri Hunger Atlas Year	2019	2023	2025
Statewide poverty rate	14.6	12.8	12.6
Percentage individuals food insecure	14.2	11.6	15.4
Percentage SNAP income eligible (All ages)	19.4	17.0	16.1
Number SNAP participants (All ages)	720,543	685,547	636,724
Percentage SNAP eligible & participating (All ages)	63.2	67.4	63.9
Percentage <18 SNAP income eligible	26.1	22.6	25.0
Number <18 SNAP participants	325,938	294,385	269,042
Percentage <5 WIC income eligible	43.3	38.4	37.4
Number <5 WIC participants	89,338	65,924	67,306
Percentage <5 WIC eligible & participating	55.9	47.8	51.2
Percentage students enrolled in NSLP	49.5	46.8	47.4
Percentage NSLP enrolled students participating	74.7	67.2	66.9
Pounds of food distributed by food banks per person in poverty	163	202	175

Figure 5

But certainly, the need trends described in the Missouri Hunger Atlas have been moving in a good direction. The number of Missourians income-eligible for SNAP, the number of children under five years of age income eligible for WIC, and the percentage of students enrolled in the NSLP have all declined over the second decade of the 21st century. NSLP eligibility rates increased very slightly in this most recent edition of the atlas by 0.6 percent.

On the performance side, there are both positive and negative trends. The trend for participation in the WIC program by eligible children under the age of five years was positive compared to the last edition. WIC participation rates increased from 47.8 percent to 51.2 percent. Meanwhile, SNAP participation rates among eligible individuals of all ages have decreased since the last atlas edition from 67.4 percent to 63.9 percent. Unfortunately, it remains true that nearly one third of all potential income-eligible participants remain outside the program. The NSLP participation rate among eligible students also trended negative. NSLP participation rates decreased from 67.2 percent to 66.9 percent in 2025.

Finally, there was a decrease reported in the 2025 atlas in the number of pounds of food distributed by Missouri food banks per person in poverty. The poundage levels of Operation Food Search and institutions associated with Feeding Missouri and Feeding America increased from 163 to 175 pounds between the 2019 edition and the 2025 edition; however, there was a decrease from 202 to 175 pounds between the 2023 and 2025 editions.

Food insecurity and hunger continue to affect all regions of the state. Generally, one can point to larger proportions of counties with high need in the southern half of the state, but needs are also high in counties near the Iowa border in north central and northeast regions, and in the City of St. Louis. In general, the clustering of high need areas is similar to the grouping of counties with high and persistent poverty levels. County-level performance is more variable, and high and low performance counties are more dispersed throughout the state. On a positive note, a much higher percentage of counties characterized as high need are also performing well; however, nine high-need counties are low performers. This result suggests that programs could be more effective in targeting high-need areas. Generally, there is low performance in all highly populated metro and suburban areas (with the notable exception of the City of St. Louis) which means a larger number of people are at risk of hunger, even if the overall county need is relatively low.

Readers of the Missouri Hunger Atlas often ask what can be done to lower need and increase performance in their areas and throughout the state. We encourage you to read the recent Missouri Food Security Task Force [Final Report](https://agriculture.mo.gov/foodsecurity.pdf/mo-fstf-final-report-2023.pdf) (agriculture.mo.gov/foodsecurity.pdf/mo-fstf-final-report-2023.pdf). The task force, comprising 25 individuals from diverse groups concerned with food security, was established as a by House Bill 431. Among the duties of this group was to provide recommendations and strategies for the reduction of food insecurity in the state.

The data reported in this atlas specifically suggests attention to the following strategies:

- Targeted assessments of program implementation in counties characterized by high need and low performance, with particular attention to the north/central region and southwest corner of Missouri.
- Increased recognition of the importance of the public and private programs that provide food assistance – they are the barrier between hunger and non-hunger for hundreds of thousands of Missourians.
- Focus on improving understanding of patterns of low performance in all metro areas and most suburban counties. Greater knowledge of reasons for lower program participation rates in these regions should result in the implementation of new program and outreach strategies.
- Greater emphasis on the nutritional and health impacts of food access among clients of all public and private programs. Research has demonstrated that poverty is positively correlated both with food insecurity and with chronic diseases such as diabetes, obesity, and hypertension. Foods that tend to be cheaper and more widely available are also typically high in calories and low in nutrition, and this contributes to levels of health vulnerabilities. Many of the counties that have the

highest food insecurity and hunger in Missouri also have the highest levels of residents with these health conditions and also lack access to full-service grocery stores.

- Strengthened linkages between private sector temporary food assistance programs (e.g., food pantries) and local food systems. The demand for the goods and services provided by private programs continues to grow. Creative efforts can link local food systems and locally grown food with these programs.
- Assessments of community food security as a core local need, alongside such social concerns as education and health. In addition, technical support should be given to communities committed to developing action plans to address the results of community food security assessments.

Limitations

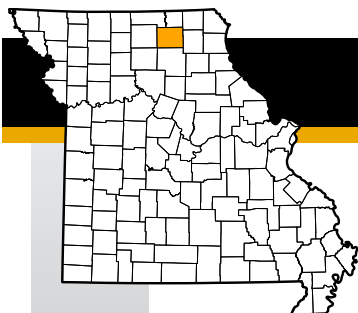

When reading the Missouri Hunger Atlas, please keep in mind a couple of important limitations. First, this atlas makes use of secondary data provided by a variety of state and federal agencies. While effort is made to ensure the accuracy of the data, there may be errors resulting from collection, reporting, and transcribing procedures.

Second, for some Missouri Hunger Atlas indicators, the data reported or utilized are based on estimates for a population. In these cases, and especially for counties with small populations, the data may have a high margin of error. Margin of error is a measure of the possible amount of variation of an estimate around the actual population value. High margins of error are problematic because it means there is less confidence that the reported value is close to the “true” value. Margins of error can occur when an estimate is made based on a relatively low number of samples.

In practice, margins of error may come into play in the Missouri Hunger Atlas for any indicator that utilizes the U.S. Census Bureau, USDA, Missouri Public Health Information Management System, and Feeding America. For more information, please refer to the actual data source.
